Statistical Applications Using Fuzzy Sets:

Statistical Applications Using Fuzzy Sets Kenneth G. Manton, Max A. Woodbury, H. Dennis Tolley, 1994-04-27 In each case the results are compared to the alternative competing analytic procedures such as latent class analysis and are shown to fit the data better provide substantively more meaningful results and generate excellent predictions of external variables not used to form the basic dimensions of the model

The Theory of Info-Statics: Conceptual Foundations of Information and Knowledge Kofi K. Dompere, 2017-07-06 This book discusses the development of a theory of info statics as a sub theory of the general theory of information It describes the factors required to establish a definition of the concept of information that fixes the applicable boundaries of the phenomenon of information its linguistic structure and scientific applications The book establishes the definitional foundations of information and how the concepts of uncertainty data fact evidence and evidential things are sequential derivatives of information as the primary category which is a property of matter and energy The sub definitions are extended to include the concepts of possibility probability expectation anticipation surprise discounting forecasting prediction and the nature of past present future information structures It shows that the factors required to define the concept of information are those that allow differences and similarities to be established among universal objects over the ontological and epistemological spaces in terms of varieties and identities These factors are characteristic and signal dispositions on the basis of which general definitional foundations are developed to construct the general information definition GID The book then demonstrates that this definition is applicable to all types of information over the ontological and epistemological spaces It also defines the concepts of uncertainty data fact evidence and knowledge based on the GID Lastly it uses set theoretic analytics to enhance the definitional foundations and shows the value of the theory of info statics to establish varieties and categorial varieties at every point of time and thus initializes the construct of the theory of info dynamics

Information, Statistics, and Induction in Science ISIS '96 1996, Melbourne, Vic, David L. Dowe, 1996 This conference will explore the use of computational modelling to understand and emulate inductive processes in science The problems involved in building and using such computer models reflect methodological and foundational concerns common to a variety of academic disciplines especially statistics artificial intelligence AI and the philosophy of science This conference aims to bring together researchers from these and related fields to present new computational technologies for supporting or analysing scientific inference and to engage in collegial debate over the merits and difficulties underlying the various approaches to automating inductive and statistical inference The proceedings also include abstracts by the invited speakers J R Quinlan J J Rissanen M Minsky R J Solomonoff H Kyburg Jr

The Theory of Info-Dynamics: Rational Foundations of Information-Knowledge Dynamics Kofi K. Dompere, 2017-12-06 This book focuses on the development of a theory of info dynamics to support the theory of info statics in the general theory of information It establishes the rational foundations of information dynamics and how these foundations relate to the general socio natural dynamics from the primary to the

derived categories in the universal existence and from the potential to the actual in the ontological space It also shows how these foundations relate to the general socio natural dynamics from the potential to the possible to give rise to the possibility space with possibilistic thinking from the possible to the probable to give rise to possibility space with probabilistic thinking and from the probable to the actual to give rise to the space of knowledge with paradigms of thought in the epistemological space The theory is developed to explain the general dynamics through various transformations in quality quantity space in relation to the nature of information flows at each variety transformation The theory explains the past present future connectivity of the evolving information structure in a manner that illuminates the transformation problem and its solution in the never ending information production within matter energy space under socio natural technologies to connect the theory of info statics which in turn presents explanations to the transformation problem and its solution The theoretical framework is developed with analytical tools based on the principle of opposites systems of actual potential polarities negative positive dualities under different time structures with the use of category theory fuzzy paradigm of thought and game theory in the fuzzy stochastic cost benefit space The rational foundations are enhanced with categorial analytics The value of the theory of info dynamics is demonstrated in the explanatory and prescriptive structures of the transformations of varieties and categorial varieties at each point of time and over time from parent offspring sequences It constitutes a general explanation of dynamics of information knowledge production through info processes and info processors induced by a socio natural infinite set of technologies in the construction destruction space

Biological and Medical Data Analysis José M. Barreiro, 2004-11-18 This book constitutes the refereed proceedings of the 5th International Symposium on Biological and Medical Data Analysis ISBMDA 2004 held in Barcelona Spain in November 2004 The 50 revised full papers presented were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on data analysis for image processing data visualization decision support systems information retrieval knowledge discovery and data mining statistical methods and tools time series analysis data management and analysis in bioinformatics integration of biological and medical data metabolic data and pathways and microarray data analysis and visualization

Theories of Knowing and Knowledge Production Kofi Kissi Dompere, 2024-09-26 The book is devoted to exploring the organizational dimensions of the general space of problem solution dualities within epistemic fields to examine the diversity and unity of knowing and information knowledge production in science and non science and how to account for and explain the forces of variety transformations as induced by decision choice actions in creating the functor space and the space of categorial converters as well as to integrate decision choice qualities of curiosity creativity hope despair success failure and their relationships with epistemic anomalies in the production of intellectual investment flows and capital stocks and the rise and fall of institutions in response to the dynamics of the open space of problem solution dualities with open algorithms under the principle of non satiation The conditions and sources of uncertainties in human actions are traced though the space of ontic epistemic

dualities as generated by cognitive capacity limitations leading to the concepts of imagination possibility and probability with corresponding worlds and then link to the discussions on thinking reasoning processes with goals objectives and visions of education in social set ups The concepts and phenomena of anticipation necessity expectation freedom anomaly curiosity creativity hope despair success and failure contained in the space of imaginations are defined under the concepts of onticity and epistemicity where their roles in the dualistic polar journeys are discussed analyzed and connected to epistemic transversality conditions under the principle of opposites relative to the conditions of input output and cost benefit dualities The book is to fill in some of the important phenomena needed in my investigation of theory of knowing as a production of intellectual investment flows and information knowledge accumulation as the production of intellectual capital stocks relative to the disequilibrium dynamics of human intellectual heritage based on fuzzy paradigm of thought thus providing an added foundation in integrating subjective elements into the development of open artificial intelligence where cost benefit values operate to determine varieties over the spaces of true false and yes no dualities in machine learning

Fuzziness and Approximate Reasoning Kofi Kissi Dompere, 2009-07-28 We do not perceive the present as it is and in totality nor do we infer the future from the present with any high degree of dependability nor yet do we accurately know the consequences of our own actions In addition there is a fourth source of error to be taken into account for we do not execute actions in the precise form in which they are imaged and willed Frank H Knight R4 34 p 202 The degree of certainty of confidence felt in the conclusion after it is reached cannot be ignored for it is of the greatest practical significance The action which follows upon an opinion depends as much upon the amount of confidence in that opinion as it does upon favorableness of the opinion itself The ultimate logic or psychology of these deliberations is obscure a part of the scientifically unfathomable mystery of life and mind Frank H Knight R4 34 p 226 227 With some inaccuracy description of uncertain consequences can be classified into two categories those which use exclusively the language of probability distributions and those which call for some other principle either to replace or supplement

A History of Mathematical Statistics from 1750 to 1930 Anders Hald,1998-04-22 The long awaited second volume of Anders Hald s history of the development of mathematical statistics Anders Hald s A History of Probability and Statistics and Their Applications before 1750 is already considered a classic by many mathematicians and historians This new volume picks up where its predecessor left off describing the contemporaneous development and interaction of four topics direct probability theory and sampling distributions inverse probability by Bayes and Laplace the method of least squares and the central limit theorem and selected topics in estimation theory after 1830 In this rich and detailed work Hald carefully traces the history of parametric statistical inference the development of the corresponding mathematical methods and some typical applications Not surprisingly the ideas concepts methods and results of Laplace Gauss and Fisher dominate his account In particular Hald analyzes the work and interactions of Laplace and Gauss and describes their contributions to modern theory Hald also offers a great deal of new material on the history of the period and enhances our understanding of both the controversies and continuities that developed between the different schools To enable readers to compare the contributions of various historical figures Professor Hald has rewritten the original papers in a uniform modern terminology and notation while leaving the ideas unchanged Statisticians probabilists actuaries mathematicians historians of science and advanced students will find absorbing reading in the author s insightful description of important problems and how they gradually moved toward solution
