**Statistical modelling in GLIM4** Murray Aitkin, Brian Francis, John Hinde, 2005-03-24 This new edition of the successful multi disciplinary text Statistical Modelling in GLIM takes into account new developments in both statistical software and statistical modelling Including three new chapters on mixture and random effects models it provides a comprehensive treatment of the theory of statistical modelling with generalised linear models with an emphasis on applications to practical problems and an expanded discussion of statistical theory A wide range of case studies is also provided using the normal binomial Poisson multinomial gamma exponential and Weibull distributions This book is ideal for graduates and research students in applied statistics and a wide range of quantitative disciplines including biology medicine and the social sciences Professional statisticians at all levels will also find it an invaluable desktop companion

**Statistical Modelling in GLIM** Murray A. Aitkin, 1989 The analysis of data by statistical modelling is becoming increasingly important This book presents both the theory of statistical modelling with generalized linear models and the application of the theory to practical problems using the widely available package GLIM The authors have taken pains to integrate the theory with many practical examples which illustrate the value of interactive statistical modelling Throughout the book theoretical issues of formulating and simplifying models are discussed as are problems of validating the models by the detection of outliers and influential observations The book arises from short courses given at the University of Lancaster's Centre for Applied Statistics with an emphasis on practical programming in GLIM and numerous examples A wide range of case studies is provided using the normal binomial Poisson multinomial gamma exponential and Weibull distributions A feature of the book is a detailed discussion of survival analysis Statisticians working in a wide range of fields including biomedical and social sciences will find this book an invaluable desktop companion to aid their statistical modelling It will also provide a text for students meeting the ideas of statistical modelling for the first time

**Statistical Modelling in GLIM 4** Murray A. Aitkin, Brian Francis, John Hinde, 2023 The authors examine the theory of statistical modelling with generalised linear models The text also looks at applications of the theory to practical problems using the GLIM4 package

*Advances in Glim and Statistical Modelling* Ludwig Fahrmeir, Brian Francis, Robert Gilchrist, 1992-07-01 [Advances in GLIM and Statistical Modelling](#) Ludwig Fahrmeir, Brian Francis, Robert Gilchrist, Gerhard Tutz, 2012-12-06 This volume presents the published Proceedings of the joint meeting of GUM92 and the 7th International Workshop on Statistical Modelling held in Munich Germany from 13 to 17 July 1992 The meeting aimed to bring together researchers interested in the development and applications of generalized linear modelling in GUM and those interested in statistical modelling in its widest sense This joint meeting built upon the success of previous workshops and GUM conferences Previous GUM conferences were held in London and Lancaster and a joint GUM Conference 4th Modelling Workshop was held in Trento The Proceedings of previous GUM conferences Statistical

Modelling Workshops are available as numbers 14 32 and 57 of the Springer Verlag series of Lecture Notes in Statistics Workshops have been organized in Innsbruck Perugia Vienna Toulouse and Utrecht Proceedings of the Toulouse Workshop appear as numbers 3 and 4 of volume 13 of the journal Computational Statistics and Data Analysis Much statistical modelling is carried out using GUM as is apparent from many of the papers in these Proceedings Thus the Programme Committee were also keen on encouraging papers which addressed problems which are not only of practical importance but which are also relevant to GUM or other software development The Programme Committee requested both theoretical and applied papers Thus there are papers in a wide range of practical areas such as ecology breast cancer remission and diabetes mortality banking and insurance quality control social mobility organizational behaviour Statistical Modelling Adriano

Decarli,1989-01-01 **Introduction to Statistical Modelling and Inference** Murray Aitkin,2022-09-30 The complexity of large scale data sets Big Data has stimulated the development of advanced computational methods for analysing them There are two different kinds of methods to aid this The model based method uses probability models and likelihood and Bayesian theory while the model free method does not require a probability model likelihood or Bayesian theory These two approaches are based on different philosophical principles of probability theory espoused by the famous statisticians Ronald Fisher and Jerzy Neyman Introduction to Statistical Modelling and Inference covers simple experimental and survey designs and probability models up to and including generalised linear regression models and some extensions of these including finite mixtures A wide range of examples from different application fields are also discussed and analysed No special software is used beyond that needed for maximum likelihood analysis of generalised linear models Students are expected to have a basic mathematical background in algebra coordinate geometry and calculus Features Probability models are developed from the shape of the sample empirical cumulative distribution function cdf or a transformation of it Bounds for the value of the population cumulative distribution function are obtained from the Beta distribution at each point of the empirical cdf Bayes s theorem is developed from the properties of the screening test for a rare condition The multinomial distribution provides an always true model for any randomly sampled data The model free bootstrap method for finding the precision of a sample estimate has a model based parallel the Bayesian bootstrap based on the always true multinomial distribution The Bayesian posterior distributions of model parameters can be obtained from the maximum likelihood analysis of the model This book is aimed at students in a wide range of disciplines including Data Science The book is based on the model based theory used widely by scientists in many fields and compares it in less detail with the model free theory popular in computer science machine learning and official survey analysis The development of the model based theory is accelerated by recent developments in Bayesian analysis *Statistical Modelling and Regression Structures* Thomas Kneib, Gerhard Tutz,2010-01-12 The contributions collected in this book have been written by well known statisticians to acknowledge Ludwig Fahrmeir s far reaching impact on Statistics as a science while celebrating his 65th birthday The contributions cover

broad areas of contemporary statistical model building including semiparametric and geoadditive regression Bayesian inference in complex regression models time series modelling statistical regularization graphical models and stochastic volatility models

**Statistical Modelling** Peter G. M. Heijden, 1992 The wide selection of articles in this volume reflects the large variety of problems that are likely to confront an applied statistician These range from methodological topics such as issues in probability theory and statistical inference computational statistics and software considerations to topics arising from particular applications such as data analyses in medicine and epidemiology sociology demography economics and so on Particular emphasis is given to the analysis of categorical data and educational testing applications

**Bayesian Statistical Modelling** P. Congdon, 2001-05-02 Bayesian methods draw upon previous research findings and combine them with sample data to analyse problems and modify existing hypotheses The calculations are often extremely complex with many only now possible due to recent advances in computing technology Bayesian methods have as a result gained wider acceptance and are applied in many scientific disciplines including applied statistics public health research medical science the social sciences and economics Bayesian Statistical Modelling presents an accessible overview of modelling applications from a Bayesian perspective Provides an integrated presentation of theory examples and computer algorithms Examines model fitting in practice using Bayesian principles Features a comprehensive range of methodologies and modelling techniques Covers recent innovations in bayesian modelling including Markov Chain Monte Carlo methods Includes extensive applications to health and social sciences Features a comprehensive collection of nearly 200 worked examples Data examples and computer code in WinBUGS are available via ftp Whilst providing a general overview of Bayesian modelling the author places emphasis on the principles of prior selection model identification and interpretation of findings in a range of modelling innovations focussing on their implementation with real data with advice as to appropriate computing choices and strategies Researchers in applied statistics medical science public health and the social sciences will benefit greatly from the examples and applications featured The book will also appeal to graduate students of applied statistics data analysis and Bayesian methods and will provide a good reference source for both researchers and students

**Nature Conservation** C Margules, M Austin, 1990-01-01 The proceedings of a Cost Effective Biological Surveys and Data Analysis workshop held at the old Quarantine Station North Head Sydney in March 1988 under the auspices of the Council of Nature Conservation Ministers CONCOM and the Australian Environment Council AEC

**The Analysis of Categorical Data Using GLIM** James K. Lindsey, 2012-04-19 The present text is the result of teaching a third year statistical course to undergraduate social science students Besides their previous statistics courses these students have had an introductory course in computer programming FORTRAN Pascal or C and courses in calculus and linear algebra so that they may not be typical students of sociology This course on the analysis of contingency tables has been given with all students in front of computer terminals and more recently micro computers working interactively with GLIM Given the importance of the analysis of categorical data

using log linear models within the overall body of models known as general linear models GLMs treated by GLIM this book should be of interest to anyone in any field concerned with such applications It should be suitable as a manual for applied statistics courses covering this subject I assume that the reader has already a reasonably strong foundation in statistics and specifically in dealing with the log linear logistic models I also assume that he or of GLIM itself In she has access to the GLIM manual and to an operational version other words this book does not pretend to present either a complete introduction to the use of GLIM or an exposition of the statistical properties of log linear logistic models For the former I would recommend Healy 1988 and Aitkin et al 1989 For the latter many books already exist of which I would especially recommend that of Pingleton 1984 in the present context

**Journal of the American Statistical Association** American Statistical Association, 1997

**Statistical Modelling** Adriano Decarli, 1989-07-24 This volume constitutes the Proceedings of the joint meeting of GLIM89 and the 4th International Workshop on statistical Modelling held in Trento Italy from 17 to 21 July 1989 The meeting aimed to bring together researchers interested in the development and application of generalized linear modelling in GLIM and those interested in statistical modelling in its widest sense This joint meeting built upon the success of previous workshops held in Innsbruck Perugia and Vienna and upon the two previous GLIM conferences GLIM82 and GLIM85 The Proceedings of the latter two being available as numbers 14 and 32 in the Springer Verlag series of Lecture Notes in Statistics Much statistical modelling is carried out using GLIM as is apparent from many of the papers in these Proceedings however the Programme Committee were also keen on encouraging papers which discussed more general modelling techniques Thus about a third of the papers in this volume are outside the GLIM framework The Programme Committee specifically requested non theoretical papers in addition to considering theoretical contributions Thus there are papers in a wide range of practical areas such as radio spectral occupancy comparison of birthweights intervals between births accidents of railway workers genetics demography medical trials the social sciences and insurance A wide range of theoretical developments are discussed for example overdispersion non exponential family modelling novel approaches to analysing contingency tables random effects models Kalman Filtering model checking and extensions of Wedderburn's theoretical underpinning of GLMs

GLIM 82: Proceedings of the International Conference on Generalised Linear Models

R. Gilchrist, 2012-12-06 This volume of Lecture Notes in Statistics consists of the published proceedings of the first international conference to be held on the topic of generalised linear models This conference was held from 13-15 September 1982 at the Polytechnic of North London and marked an important stage in the development and expansion of the GLIM system The range of the new system tentatively named Prism is here outlined by Bob Baker Further sections of the volume are devoted to more detailed descriptions of the new facilities including information on the two different numerical methods now available Most of the data analyses in this volume are carried out using the GLIM system but this is of course not necessary There are other ways of analysing generalised linear models and Peter Green here discusses the many attractive

features of APL including its ability to analyse generalised linear models Later sections of the volume cover other invited and contributed papers on the theory and application of generalised linear models Included amongst these is a paper by Murray Aitkin proposing a unified approach to statistical modelling through direct likelihood inference and a paper by Daryl Pregibon showing how GLIM can be programmed to carry out score tests A paper by Joe Whittaker extends the recent discussion of the relationship between conditional independence and log linear models and John Hinde considers the introduction of an independent random variable into a linear model to allow for unexplained variation in Poisson data

**Statistical Modelling of Quaternary Science Data** Darrel Maddy, John S. Brew, 1995

**Statistical Modelling in Hydrology** Robin T. Clarke, 1994-11-29 Emphasizes the interactive analysis of hydrological data made possible through the widespread availability of desktop computers Demonstrates new techniques for assessing the adequacy and performance of hydrological models Offers an in depth discussion of examples drawn from numerous applications such as the analysis of river flow extremes regionalization of flow characteristics infiltration of water into soil profiles overland flow studies and rainfall runoff modelling
