Pathways to the Origin and Evolution of Meanings in the Universe The book explains why meaning is a part of the universe populated by life and how organisms generate meanings and then use them for creative transformation of the environment and themselves This book focuses on interdisciplinary research at the intersection of biology semiotics philosophy ethology information theory and the theory of evolution Such a broad approach provides a rich context for the study of organisms and other semiotic agents in their environments This methodology can be applied to robotics and artificial intelligence for developing robust adaptable learning devices In this book leading interdisciplinary scholars reveal their vision on how to integrate natural sciences with semiotics a theory of meaning making and signification Developments in biology indicate that the capacity to create and understand signs is not limited to humans or vertebrate animals but exists in all living organisms the fact that inspired the integration of biology and semiotics into biosemiotics The authors discuss the nature of semiotic agents organisms and other autonomous goal directed units meaning signs information memory evolution and consciousness Also discussed are issues including the origin of life potential meaning and its actualization top down causality in physics and biology capacity of organisms to encode their functions the strategy of organisms to combine homeostasis with direct adaptation to new life cycle phases or new environments multi level memory systems increase of freedom via enabling constraints creative modeling in evolution and learning communication in animals and humans the origin and function of language and the distribution and transfer of life in space This is the first book on biosemiotics in its global conceptual and spatial scope Biosemiotics is presented using the language of natural sciences which supports the scientific grounding of semiotic terms Finally the cosmic dimension of life and meaning making leads to a reconsideration of ethical principles and ecological mentality here on earth and in space exploration Audience Theoretical biologists ethologists astrobiologists ecologists evolutionary biologists philosophers phenomenologists semioticians biosemioticians molecular biologists linguists system scientists and engineers

The Origin of Intelligence Thomas D. Kerr, 2009 What does the place of information within the cosmos have to do with the life of any one person or with the nature of right and wrong It changes everything Information can be viewed as nothing more than an ephemeral artefact of matter energy space and time Or it can be viewed as a component of the universe every bit as real and consequential as the others This book shows not only that information is real in its own right but that the intelligence found in people would not have come into existence if it were not The most powerful tool and weapon of humans is the information system their minds together comprise Individuals in all their variety are the way they are because that is the way that together they are most intelligent From the evolutionary mechanism which generated human intelligence to the affairs of people today the driving force has always been the role of information in individual lives The result of their decisions through the distant past has been a kind of intelligence new in the universe People together form a functional mental system that is of a higher order of complexity and intelligence than any individual mind could be Individual minds are designed not to survive alone in a wilderness but to complement the human information system as a whole To make the system function human intelligence and morality necessarily evolved together People can think together only if they get along The basic outlines of morality are as fixed and timeless and as rooted in human evolution as the intelligence it evolved with Each is both cause and product of the other The intelligence of the human information system as a whole is the central principle of human life Acknowledging the reality of information changes forever the divide between secular and religious outlooks Religions envision the information world by belief in an invisible network of connections between people and the world around them But these connections exist in hard reality because the existence of information is just as real and provable as the existence of rocks Dividing reality by believing that physical things are real and information is not trivialises the most important aspect of human existence Once the illusion that information is not real is given up the basic relationships of life re assume the kinds of firm definitions that they have always been given by religions To live in harmony with the reality of information each person must find a way to recognise that their own thoughts and feelings which consist of information are just as real as any objects they think about This has always been the essential doorway to reality opening to a world of enormous intelligence love and beauty Reasons to care about other people appear clearly and simply as features of the way things are endowing every life with a sense of purpose as an indispensable element of the human information system Together humans exist to wonder and speculate create and explore seek truth and solve the riddles of the universe

 evolution and nervous systems All biology only makes sense when seen in the light of evolution and this is especially true for
 the nervous system All animals have nervous systems that mediate their behaviors many of them species specific yet these
 nervous systems all evolved from the simple nervous system of a common ancestor To understand these nervous systems we
 need to know how they vary and how this variation emerged in evolution In the first edition of this important reference work
 over 100 distinguished neuroscientists assembled the current state of the art knowledge on how nervous systems have
 evolved throughout the animal kingdom This second edition remains rich in detail and broad in scope outlining the changes
 in brain and nervous system organization that occurred from the first invertebrates and vertebrates to present day fishes
 reptiles birds mammals and especially primates including humans The book also includes wholly new content fully updating
 the chapters in the previous edition and offering brand new content on current developments in the field Each of the volumes
 has been carefully restructured to offer expanded coverage of non mammalian taxa mammals primates and the human
