Desmond Yap, 2017-01-27 This dissertation Renal and Patient Survival in Lupus Nephritis the Impact of Conventional and Novel Immunosuppressive Treatments by Yat hin Desmond Yap was obtained from The University of Hong Kong Pokfulam Hong Kong and is being sold pursuant to Creative Commons Attribution 3.0 Hong Kong License The content of this dissertation has not been altered in any way We have altered the formatting in order to facilitate the ease of printing and reading of the dissertation All rights not granted by the above license are retained by the author Abstract Lupus nephritis LN is an important clinical manifestation of systemic lupus erythematosus SLE and contributes significantly to patient morbidity and mortality In the era of effective immunosuppressive treatments the clinical outcomes of LN patients have substantially improved and the 10 year patient and renal survival rates were 98.2% and 98.0% respectively With prolonged patient survival infection 50.0% cardiovascular disease 20.8% and malignancy 12.5% but not uncontrolled disease have emerged as the leading causes of death in LN patients The strongest predictor of mortality in LN patients however was endstage renal disease ESRD as indicated by a high standardized mortality ratio of 26.1 which doubled that of cardiovascular disease and history of malignancy Despite the improved patient outcomes conventional treatment such as cyclophosphamide CTX was associated with significant toxicities and suboptimal long term renal prognosis and hence alternative immunosuppressive agents with anti fibrotic properties such as mycophenolate mofetil MMF and proliferation signal inhibitors PSI warrants further investigation In Chinese patients with proliferative LN corticosteroids and MMF as initial therapy conferred favorable long term outcomes with 10 year patient and renal survival of 91% and 86% respectively This regimen when used as continuous induction maintenance treatment is Efficacious and well tolerated and the continuation of MMF treatment for at least 24 months was associated with significantly lower risk of relapse when compared to treatment for shorter duration As the severity of tubulointerstitial fibrosis can be attenuated by growth factors with anti fibrotic properties such as bone morphogenetic protein 7 BMP7 hepatocyte growth factor HGF and vascular endothelial growth factor VEGF studies were conducted in NZB W F1 mice to investigate the impact of treatment on intra renal expression of growth factors pertinent to fibrosis Methylprednisolone MP combined with either MMF or CTX have resulted in increased BMP7 and reduced HGF and VEGF in the renal parenchyma reduced fibrosis and improved clinical parameters compared with MP alone The data also suggested that the increase in BMP7 a potentially anti fibrotic cytokine was observed earlier in the mice treated with MMF compared with those treated with CTX Our preliminary clinical experience also suggested that PSI combined with corticosteroids may serve as an efficacious and well tolerated immunosuppressive regimen in human LN especially in patients with MMF intolerance or history of malignancy These observations have important implications on the choice of therapy for the treatment of proliferative LN As for membranous LN our pilot results suggested that corticosteroids combined with either MMF or tacrolimus can be effective treatment options for patients with significant proteinuria while each regimen exhibits distinct efficacy and tolerability profiles In conclusion the results from the studies included in this

thesis show the magnitude of benefit conferred by novel immunosuppressive treatment regimens for LN on renal and patient survival and on the associated intra renal mechanisms pertaining to fibrosis DOI 10 5353 th_b5333557 Subjects Lupus nephritis Treatment *The Lupus Encyclopedia* Donald E. Thomas Jr.,2014-06-23 Systemic lupus erythematosus is an autoimmune disease that can affect any system and organ in the body This compendium provides detailed explanations of every body system potentially affected by the disease along with practical advice about coping **Renal and Patient Survival in Lupus Nephritis** □□□,University of Hong Kong,2013 **Lahita's Systemic Lupus Erythematosus** Robert G. Lahita,2021-07-23 Systemic lupus erythematosus SLE commonly called lupus is a chronic autoimmune disorder that can affect virtually any organ of the body In lupus the body s immune system which normally functions to protect against foreign invaders becomes hyperactive forming antibodies that attack normal tissues and organs including the skin joints kidneys brain heart lungs and blood Lupus is characterized by periods of illness called flares and periods of wellness or remission Because its symptoms come and go and mimic those of other diseases lupus is difficult to diagnose There is no single laboratory test that can definitively prove that a person has the complex illness To date lupus has no known cause or cure Early detection and treatment are the key to a better health outcome and can usually lessen the progression and severity of the disease Anti inflammatory drugs antimalarials and steroids such as cortisone and others are often used to treat lupus Cytotoxic chemotherapies like those used in the treatment of cancer are also used to suppress the immune system in lupus patients A new edition of this established and well regarded reference combines basic science with clinical science to provide a translational medicine model Systemic Lupus Erythematosus Sixth Edition is a useful reference for specialists in the diagnosis and management of patients with SLE a tool for measurement of clinical activity for pharmaceutical development and basic research of the disease and a reference work for hospital libraries Completely updated revised and expanded with the most comprehensive and accessible reference on SLE for clinicians and scientists Full color presentation throughout the book Provides the latest information available on diagnosis and treatment Incorporates an international panel of authors who are experts in their fields with an emphasis on young cutting edge scientists and physicians **Lupus Nephritis** Hussein A.
