**Theory** Richard S. Markovits,2020-05-30 This book examines the implications of The General Theory of Second Best for analyzing the economic efficiency of non government conduct or government policies in an economically efficient way It develops and legitimates an economically efficient economic efficiency analysis protocol with three unique characteristics First the protocol focuses separately on each of a wide variety of categories of economic inefficiency many of which conventional analyses ignore Second it analyzes the impact of conduct or policies on each of these categories of economic inefficiency primarily by predicting the respective conduct s policy s impact on the distortion that the economy s various Pareto imperfections generate in the profits yielded by the resource allocations associated with the individual categories of economic inefficiency i e on the difference between their profitability and economic efficiency And third it is third best i e it instructs the analyst to execute a theoretical or empirical research project if and only if the economic efficiency gains the project is expected to generate by increasing the accuracy of economic efficiency conclusions exceed the predicted allocative cost of its execution and public financing The book also uses the protocol to analyze the economic efficiency of specific policies so as to illustrate both how it differs from the protocols that most applied welfare economists continue to use and how its conclusions differ from those produced by standard analysis      **Wireless Sensor Networks and Energy**

**Application of PSO for Optimization of Power Systems Under Uncertainty** Venkata Swaroop Pappala, 2010-07 Doctoral Thesis Dissertation from the year 2009 in the subject Electrotechnology grade 1 0 University of Duisburg Essen Institute of Electrical Power Systems course Electrical Engineering language English abstract The primary objective of this dissertation is to develop a black box optimization tool The algorithm should be able to solve complex nonlinear multimodal discontinuous and mixed integer power system optimization problems without any model reduction Although there are many computational intelligence CI based algorithms which can handle these problems they require intense human intervention in the form of parameter tuning selection of a suitable algorithm for a given problem etc The idea here is to develop an algorithm that works relatively well on a variety of problems with minimum human effort The most significant optimization task in the power system operation is the scheduling of various generation resources Unit Commitment UC The current practice used in UC modelling is the binary approach This modelling results in a high dimension problem This in turn leads to increased computational effort and decreased efficiency of the algorithm A duty cycle based modelling proposed in this thesis results in 80 percent reduction in the problem dimension The stern uptime and downtime requirements are also included in

the modelling Therefore the search process mostly starts in a feasible solution space From the investigations on a benchmark problem it was found that the new modelling results in high quality solutions along with improved convergence The final focus of this thesis is to investigate the impact of unpredictable nature of demand and renewable generation on the power system operation These quantities should be treated as a stochastic processes evolving over time A new PSO based uncertainty modelling technique is used to abolish the restrictions imposed by the conventional modelling algorithms The stochastic models are

The Two Majorities and the Puzzle of Modern American Politics Byron E. Shafer, 2003 Where did the Era of Divided Government come from What sustains split partisan control of the institutions of American national government year after year Why can it shift so easily from Democratic or Republican presidencies coupled with Republican or Democratic Congresses How can the vast array of issues and personalities that have surfaced in American politics over the last forty years fit so neatly within indeed reinforce the sustaining political pattern of our time These big questions constitute the puzzle of modern American politics The old answer a majority and a minority party plus dominant and recessive public issues will not work in the Era of Divided Government Byron Shafer a political scientist who is regarded as one of the most comprehensive and original thinkers on American politics provides a convincing new answer that has three major elements These elements in combination not divided government as a catch phrase are the real story of politics in our time The first element is comprised of two great sets of public preferences that manifest themselves at the ballot box as two majorities The old cluster of economic and welfare issues has not so much been displaced as simply joined by a second cluster of cultural and national concerns The second element can be seen in the behavior of political parties and party activists whose own preferences don't match those of the general public That public remains reliably left of the active Republican Party on economic and welfare issues and reliably right of the active Democratic Party on cultural and national concerns The third crucial element is found in an institutional arrangement the distinctively American matrix of governmental institutions which converts those first two elements into a framework for policymaking year in and year out In the first half of the book Shafer examines how dominant features of the Reagan first Bush Clinton and second Bush administrations reflect the interplay of these three elements Recent policy conflicts and institutional combatants in Shafer's analysis illuminate this new pattern of American politics In the second half he ranges across time and nations to put these modern elements and their composite pattern into a much larger historical and institutional framework In this light modern American politics appears not so much as new and different but as a distinctive recombination of familiar elements of a political style a political process and a political conflict that has been running for a much much longer time
