## **The Official Point Of View:**

The Concept of Law from a Transnational Perspective Detlef von Daniels, 2016-03-23 This book brings together the fruits of different traditions in legal philosophy and draws on them to develop a systematic thesis on the concept of law. The work uses a legal model to explore the underlying question of how the current phenomena of transnational law are best understood in combination with an examination of the traditions of Jürgen Habermas's critical theory and H. L. A. Hart's analytic jurisprudence. This leads the author to conclude that the key to a fruitful dialogue and comprehensive understanding is to appreciate that the concept of law is not state centered and must reflect relationships to other legal systems.

Initiation and Control of Gait from First Principles: A Mathematically Animated Model of the Foot Craig Nevin, 2010-05-21 This thesis examines the anatomical locations of the dynamic pressures that create the first five footprints when a standing person starts to walk. It is hypothesized that the primary activity starts with the dorsiflexion or lifting of the great toe. Consequently the metatarsophalangeal region of the forefoot was studied from three directions. Viewed side on the great toe free body is found from a detailed post hoc analysis of previous kinematic data obtained from cadavers to operate as a cam. The cam model also follows closely from Aristotle's ancient description of the hinged instrument of animate motion. Viewed in coronal cross section the first metatarsal torsion strength was estimated in 13 humans, 1 gorilla, 3 chimpanzees, 1 orangutan and 1 baboon set of dry bone specimens of the hands and feet. The first metatarsal bone alone contributes 43% of the total strength of all the metatarsal bones. A result unique amongst the hominids and apes studied. Viewed in horizontal plan the dynamic components and principle axes of the footprints of 54 barefoot humans (32 male, 22 female) age 32-11 years were studied whilst standing on a 0.5m pressure plate and then immediately when walking over a 2m plate (4 sensors per cm<sup>2</sup>) sampled at 100hz. Two footprints were obtained during the initial stance posture and the first three footprints of the initial walk. Three new principles of animate motion were deduced from the divergent results obtained from complete and dissected cadavers. The metatarsal cam from the sagittal side view, the ground reaction torque from the frontal coronal view and the amputation artifact. The philosophy of experimenting on inanimate cadavers rather than living subjects was intensively researched. Instead of assuming that gait is a uniform or regular motion as is usual the foot was analyzed rather as if it was a beam attached to the ground. Engineering equations were used to determine the flexural properties of the foot every 0.01 seconds including the principle axes radius of gyration and the local shear stresses on the sensors spaced 5.7mm apart. A sequence of these impressions creates a mathematically animated model of the footprint. The local force under the foot was normalized against both the total force and contact duration. The forces under the foot were each divided between 10 anatomical regions using individual masks for each foot strike. Producing a 54 subject database from which the normal behavior of the foot could be quantified. The group showed a surprisingly low right foot step off dominance of only 54%. The combination of the radius of

gyration and impulse in particular produces a succinct but powerful summary of the footprint during dynamic activity The initial angle and magnitudes of the loads that are applied and removed demonstrates that the body first rocks onto the heels after the instruction to walk is given The feet simultaneously invert and their arches rise off the ground as anticipated The principle axes were then animated in a mathematical four dimensional model The horizontal radius of gyration is on average 5 cm during heel strike but increases to 20 cm as the forefoot comes into contact with the ground finally rising to 25 cm at toe off Significantly the applied load during the fore foot loading phase is more widely distributed than the load being removed A new and unanticipated result that is believed to be a special characteristic of the animate foot The standard deviation of the force under the great toe is the first mechanical parameter to converge in the 54 subjects conclusively verifying the hypothesis that the great toe both initiates and controls gait     *Temporal Points of View* Margarita Vázquez Campos, Antonio Manuel Liz Gutiérrez, 2015-08-14 This book seeks to arrive at a better understanding of the relationships between the objective and subjective aspects of time It discusses the existence of fluent time a controversial concept in many areas from philosophy to physics Fluent time is understood as directional time with a past a present and a future We experience fluent time in our lives and we adopt a temporal perspective in our ways of knowing and acting Nevertheless the existence of fluent time has been debated for both philosophical and scientific reasons thus creating a rift between the subjective and objective aspects of time Starting from the basic notion of points of view or perspectives this book explores the relationships between objective or external time as it has been conceptualized by science and subjective or internal time which is involved in our lived experiences It establishes a general framework encompassing the nature structure and mode of existence of points of view in which the objective and subjective aspects of time can be integrated The book mainly addresses researchers and postgraduates in philosophy and logic Additionally it offers inspiration for physicists and computer scientists involved in the modeling and simulation of complex behaviors for which the representation of internal time should be considered together with the notion of objective external time     *The Edinburgh encyclopaedia, conducted by D. **Feminism And Philosophy** Nancy Tuana, Rosemarie Putnam Tong, 2018-02-06 The past twenty years have seen an explosion of work by feminist philosophers and several surveys of this work have documented the richness of the many different ways of doing feminist philosophy But this major new anthology is the first broad and inclusive selection of the most important work in this field There are many unanswered questions about the future of feminist philosophy Which of the many varieties of feminist philosophy will last and which will fade away What kinds of accommodations will be possible with mainstream non feminist philosophy Which will separate themselves and flourish on their own To what extent will feminists change the topics philosophers address To what extent will they change the very way in which philosophy is done However these questions are answered it is clear that feminist philosophy is having and will continue to have a major impact on the discipline of philosophy This volume is the first to allow the scholar the student and

other interested readers to sample this diverse literature and to ponder these questions for themselves Organized around nine traditional types of feminist philosophy Feminism and Philosophy is an imaginatively edited volume that will stimulate readers to explore many new pathways of understanding It marks a defining moment in feminist philosophy and it will be an essential text for philosophers and for feminist theorists in many other fields *Encyclopaedia Metropolitana; Or, Universal Dictionary of Knowledge, on an Original Plan ... with ...
