

# Origin of Eukaryotic Cells

- **Endosymbiont Theory:** Eukaryotic cells arose from living communities formed by prokaryotic organisms.
- The evolution towards eukaryotic cells began between 1.5 and 2 billion years ago in what is known as "endosymbiosis": an internal, mutually beneficial relationship.
- Small aerobic prokaryotes are thought to have entered and lived inside larger anaerobic prokaryotes. Later additional small photosynthetic prokaryotes are also thought to have entered and lived inside.
- This is huge! Chloroplasts!! Mitochondria!!

What is some evidence that you know of that would lead you to think that chloroplasts and mitochondria are unrelated to our genetic history?
