

THE P 38 EXPOSED

9mm Pistole 38

The hammer and trigger mechanism of the P 38 consisted of eight parts. The operating sequence is essentially that of the *Armeo-Pistole* lockwork, as pressure on the trigger (19) pulls the trigger bar (28) forward, rocking the sear (29) and rotating the hammer (1) by means of the hammer lifter (30), until the sear releases the hammer at the end of its travel. The hammer then flies forward and strikes the firing pin, which can move forward only because the actuator has raised the spring-loaded firing-pin lock. The unlocking, cocking and re-locking cycle then begins, during

which the slide rides back over the hammer and disconnects the trigger bar from the sear. When the firer releases the trigger, the spring-loaded trigger bar re-engages the sear and the pistol can be fired again. The hammer can be lowered onto the firing-pin head, as the pin is locked rigidly in place and there is no danger. Applying the safety catch when the hammer is cocked achieves the same end, but the hammer flies disconcertingly forward as the catch stem rotates; however, this is not as dangerous as it looks, as the firing-pin lock is engaged.
