McCormick, 2017-08-08 Captain Young and I for some years have been gathering material from all over the world about the Selachians the Sharks Skates Rays and their allies of which there are more than 600 known species We originally intended merely to up date Captain Young s book *Shark Shark* published by Gotham House in 1934 and now a collector s item but as the material ever expanded it was decided that an entirely new book covering a much broader field was needed Adaterial was collected from all over the world for many years When Captain Young and I felt that the research was nearly completed we called upon Tom Allen an experienced newspaperman to aid us in transforming the research material into a book Tom and I continued the research up to and beyond the completion of the manuscript Tom also did further research and added new material in the course of writing the book In all scientific classifications the Selachians are separated clearly from the Teleosteans or Bony Fishes and there are even leading ichthyologists ho do not regard the former as fishes at all but rather as representing a separate and distinct Class of animal life **Sharks** Gene Helfman, George H. Burgess, 2014-05-15 Do sharks lay eggs or give birth to live young Do sharks sleep How long do they live

How likely are shark attacks This book answers your questions about some of nature s most misunderstood animals Answering every conceivable question about sharks authors Gene Helfman and George H Burgess describe the fascinating biology behavior diversity there are more than 1 000 species worldwide and cultural importance of sharks their close relationship to skates and rays and their critical role in healthy ecosystems Helfman and Burgess take readers on a round the world tour of shark habitats which include oceans as well as lakes and even rivers as far up the Mississippi as St Louis They describe huge ferocious predators like Great White and Tiger sharks and species such as Basking and Whale sharks that feed on microscopic prey yet can grow to lengths of more than 40 feet The mysterious and powerful Greenland shark the authors explain reaches a weight of 2 200 pounds on a diet of seal flesh Small less than 2 foot long Cookiecutter sharks attack other sharks and even take a chunk out of the occasional swimmer Despite our natural fascination with sharks we have become their worst enemy Many shark species are in serious decline and a number are threatened with extinction as a result of overfishing and persecution Sharks The Animal Answer Guide presents a perfect mix of current science history anthropology intriguing facts and gripping photographs Whether your fascination with sharks stems from fear or curiosity your knowledge of these animals will improve immensely when you consult this book The World Trade in Sharks ,1996 **Pamphlets on Biology** ,1891 **The Humboldt Library of Science** ,1885 Shadows in the Sea Harold Weber McCormick,1964 **Leaves from a Naturalist's Notebook** Andrew Wilson,1882 **Sharks, Skates, and Rays** Perry W.
