Martin Bückner, George Corliss, Paul Hovland, Uwe Naumann, Boyana Norris, 2006-02-03 Covers the state of the art in automatic differentiation theory and practice Intended for computational scientists and engineers this book aims to provide insight into effective strategies for using automatic differentiation for design optimization sensitivity analysis and uncertainty quantification

Multiscale Modelling and Simulation Sabine Attinger, Petros Koumoutsakos, 2012-12-06 In August 2003 ETHZ Computational Laboratory CoLab together with the Swiss Center for Scientific Computing in Manno and the Università della Svizzera Italiana USI organized the Summer School in Multiscale Modelling and Simulation in Lugano Switzerland This summer school brought together experts in different disciplines to exchange ideas on how to link methodologies on different scales Relevant examples of practical interest include structural analysis of materials flow through porous media turbulent transport in high Reynolds number flows large scale molecular dynamic simulations ab initio physics and chemistry and a multitude of others Though multiple scale models are not new the topic has recently taken on a new sense of urgency A

number of hybrid approaches are now created in which ideas coming from distinct disciplines or modelling approaches are unified to produce new and computationally efficient techniques

Coping with Complexity: Model Reduction and Data Analysis Alexander N. Gorban, Dirk Roose, 2010-10-21 This volume contains the extended version of selected talks given at the international research workshop Coping with Complexity Model Reduction and Data Analysis Ambleside UK August 31 September 4 2009 The book is deliberately broad in scope and aims at promoting new ideas and methodological perspectives The topics of the chapters range from theoretical analysis of complex and multiscale mathematical models to applications in e g fluid dynamics and chemical kinetics

Geometric Partial Differential Equations - Part I, 2020-01-14 Besides their intrinsic mathematical interest geometric partial differential equations PDEs are ubiquitous in many scientific engineering and industrial applications They represent an intellectual challenge and have received a great deal of attention recently The purpose of this volume is to provide a missing reference consisting of self contained and comprehensive presentations It includes basic ideas analysis and applications of state of the art fundamental algorithms for the approximation of geometric PDEs together with their impacts in a variety of fields within mathematics science and engineering About every aspect of computational geometric PDEs is discussed in this and a companion volume Topics in this volume include stationary and time dependent surface PDEs for geometric flows large deformations of nonlinearly geometric plates and rods level set and phase field methods and applications free boundary problems discrete Riemannian calculus and morphing fully nonlinear PDEs including Monge Ampere equations and PDE constrained optimization Each chapter is a complete essay at the research level but accessible to junior researchers and students The intent is to provide a comprehensive description of algorithms and their analysis for a specific geometric PDE class starting from basic concepts and concluding with interesting applications Each chapter is thus useful as an introduction to a research area as well as a teaching resource and provides numerous pointers to the literature for further reading The authors of each chapter are world leaders in their field of expertise and skillful writers This book is thus meant to provide an invaluable readable and enjoyable account of computational geometric PDEs
