**Tensor-GMRES Method for Large Sparse Systems of Nonlinear Equations** Dan Feng, Research Institute for Advanced Computer Science (U.S.), Thomas H. Pulliam, 1994 Abstract This paper introduces a tensor Krylov method the tensor GMRES method for large sparse systems of nonlinear equations This method is a coupling of tensor model formation and solution techniques for nonlinear equations with Krylov subspace projection techniques for unsymmetric systems of linear equations Traditional tensor methods for nonlinear equations are based on a quadratic model of the nonlinear function a standard linear model augmented by a simple second order term These methods are shown to be significantly more efficient than standard methods both on nonsingular problems and on problems where the Jacobian matrix at the solution is singular A major disadvantage of the traditional tensor methods is that the solution of the tensor model requires the

factorization of the Jacobian matrix which may not be suitable for problems where the Jacobian matrix is large and has a bad sparsity structure for an efficient factorization. We overcome this difficulty by forming and solving the tensor model using an extension of a Newton GMRES scheme. Like traditional tensor methods we show that the new tensor method has significant computational advantages over the analogous Newton counterpart. Consistent with Krylov subspace based methods the new tensor method does not depend on the factorization of the Jacobian matrix. As a matter of fact the Jacobian matrix is never needed explicitly. **Nieuw Archief Voor Wiskunde**, 2006. *Recherches physiques sur la lumière, la pesanteur, les marées, le cours des astres et sur la comète de 1860*, 1760. **SIAM Journal on Scientific Computing**, 2009. *Krylov Methods for the Numerical Solution of Initial-value Problems in Differential Algebraic Equations* Steven Lewis Lee, 1993.
