How to Lie with Maps Mark Monmonier, 2014-12-10 Originally published to wide acclaim this lively cleverly illustrated essay on the use and abuse of maps teaches us how to evaluate maps critically and promotes a healthy skepticism about these easy to manipulate models of reality Monmonier shows that despite their immense value maps lie In fact they must The second edition is updated with the addition of two new chapters 10 color plates and a new foreword by renowned geographer H J de Blij One new chapter examines the role of national interest and cultural values in national mapping organizations including the United States Geological Survey while the other explores the new breed of multimedia computer based maps To show how maps distort Monmonier introduces basic principles of mapmaking gives entertaining examples of the misuse of maps in situations from zoning disputes to census reports and covers all the typical kinds of distortions from deliberate oversimplifications to the misleading use of color Professor Monmonier himself knows how to gain our attention it is not in fact the lies in maps but their truth if always approximate and incomplete that he wants us to admire and use even to draw for ourselves on the facile screen His is an artful and funny book which like any good map packs plenty in little space Scientific American A useful guide to a subject most people probably take too much for granted It shows how map makers translate abstract data into eye catching cartograms as they are called It combats cartographic illiteracy It fights cartophobia It may even teach you to find your way For that alone it seems worthwhile Christopher Lehmann Haupt The New York Times witty examination of how and why maps lie The book conveys an important message about how statistics of any kind can be manipulated But it also communicates much of the challenge aesthetic appeal and sheer fun of maps Even those who hated geography in grammar school might well find a new enthusiasm for the subject after reading
