Radiocarbon After Four Decades Ervin Taylor, Austin Long, Renee S. Kra, 2013-03-09 Radiocarbon After Four Decades An Interdisciplinary Perspective commemorates the 40th anniversary of radiocarbon dating The volume presents discussions of every aspect of this dating technique as well as chronicles of its development and views of future advancements and applications All of the 64 authors played major roles in establishment development or application of this revolutionary scientific tool The 35 chapters provide a solid foundation in the essential topics of radiocarbon dating Historical Perspectives The Natural Carbon Cycle Instrumentation and Sample Preparation Hydrology Old World Archaeology New World Archaeology Earth Sciences and Biomedical Applications

Radiochemical Methods in Analysis D. Coomber, 2012-12-06 The aim of this book is to give an account of the principal radiochemical methods used in chemical analysis It is assumed that the reader already has some background knowledge of radioactivity available from several general textbooks For this reason some subjects e g the fundamentals of radio activity the properties of radiation statistics of counting procedures the precautions needed in working with radioactive materials which could have occupied half the text are not considered in detail The different aspects of radiochemical analysis have been covered by specialized books and reviews e g on activation analysis gamma spectrometry radiometric titrations A good deal of information is in the form of reports of meetings and symposia and liquid scintillation counting for instance has been mainly covered in this way There are also a large number of journals It is therefore hoped that this book will help fill the gap between the introductory texts and the specialized sources many of which are referred to in the chapter references The first three chapters in the present volume deal with the methods of measurement of radioactive nuclides Chapter I gives a general account of detection and measurement techniques The next two chapters are devoted to two specialized techniques gamma ray spectrometry and liquid scintillation counting Research Instrumentation for the 21st Century Gary R.

Beecher, 2012-12-06 The Annual Beltsville Symposium serves as a forum for presenting recent developments in basic research that contribute solutions to agricultural problems The eleventh in this series focuses on instrumentation techniques

which provide powerful new research tools These tools will provide information that can lead to a better understanding of biological and physical processes critical to the solution of today's agricultural problems The tools discussed include isotope technology separation techniques microscopy electro magnetic spectroscopy resonance and mass spectrometry and microcomputers This Symposium brought together scientists who are at the forefront of the development of many of these tools and those who are applying them to problems directly related to agricultural research

Alpen, 2013-09-17 Liquid Scintillation Counting Recent Applications and Development Volume 1 Physical Aspects covers the proceedings of the International Conference on Liquid Scintillation Counting Recent Applications and Development held on August 21-24, 1979 at the University of California San Francisco. The book contains papers dealing with the physical aspects of liquid scintillation science and technology. The text discusses the history of liquid scintillation development, scintillation physics and scintillators, and modern techniques for measuring the quenching correction in a liquid scintillation counter. The book also describes radioactivity standards, the advances in instrumentation, alpha counting, and Erenkov counting. People involved in pharmaceutical chemistry and scientific instruments laboratories will find the book invaluable.
