The Photographic Lens

Carroll Bernard Neblette

The Photographic Lens:

The Photographic Lens Sidney F. Ray,1979 [A History of the Photographic Lens](#) Rudolf Kingslake,1989-11-22 The lens is generally the most expensive and least understood part of any camera In this book Rudolf Kingslake traces the historical development of the various types of lenses from Daguerre's invention of photography in 1839 through lenses commonly used today From an early lens still being manufactured for use in low cost cameras to designs made possible through such innovations as lens coating rare earth glasses and computer aided lens design and testing the author details each major advance in design and fabrication The book explains how and why each new lens type was developed and why most of them have since been abandoned This authoritative history of lens technology also includes brief biographies of several outstanding lens designers and manufacturers of the past [A History of the Photographic Lens](#) Rudolf Kingslake,1989-10-28 Contents Introduction Meniscus Landscape Lenses Portrait Lenses Early Double Objectives Optical Glass The First Anastigmats The Triplet Lens and Its Modifications Meniscus Anastigmats Telephoto Lenses Reversed Telephoto Lenses Varifocal and Zoom Lenses Catadioptric Mirror Systems Lens Attachments Brief Biographies Appendix A Glossary of Optical Terms Index In this book author Kingslake traces the historical development of the various types of lenses from Daguerre's invention of photography in 1839 through lenses commonly used today Provides valuable information to anyone interested in the evolution of lens design *Behind the Photographic Lens of Sergio Larraín* Jean Paul Brandt,2025-08-06 This book delves into the visual and cultural legacy of Sergio Larraín one of Chile's most enigmatic photographers This critical exploration combines detailed visual analysis with an interdisciplinary perspective to uncover Larraín's profound influence on Latin American and European photography From Magnum Photos to Satori photography the author navigates the intersection of art politics and spirituality revealing the untold narratives behind Larraín's iconic and lesser known works This book is essential for scholars practitioners and enthusiasts of visual studies Latin American cultural history and photography [The Photographic Lens](#) Hans Martin Brandt,1968 **A First Book of the Lens** C. Welborne Piper,2017-10-22 Excerpt from A First Book of the Lens An Elementary Treatise on the Action and Use of the Photographic Lens In optics we are concerned mainly with the effect of placing obstructions of various kinds in the way of the travelling energy and wavefront A lens is nothing but a temporary obstruction placed in the way of the light and the effect of such an obstruction is that the direction of the impulse is changed and the form of the wavefront altered just as the circular form of the water ripple is altered if it meets an obstruction in the pond This is the point where the two theories of optics start We may study only the effect of the obstruction on the wave front which is physical optics or we may confine ourselves to the study of the effect of the obstruction on the direction of the impulse which is geometrical optics In either case we shall arrive at the same result for under all conditions the direction of impulse is normal to the wave front and so the two change together About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www

forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state of the art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition. We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works.

Optics in Photography Rudolf Kingslake, 1992 This book explains fundamental optical principles that apply to photography cameras and lenses. It is intended for professionals and serious amateur photographers as well as lens designers and optical engineers.

[The Photographic Lens](#), 1968 **The Optics of Photography and**

Photographic Lenses John Traill Taylor, 1892 [Primitive Photography](#) Alan Greene, 2013-04-11 Primitive Photography considers the hand made photographic process in its entirety showing the reader how to make box cameras lenses paper negatives and salt prints using inexpensive tools and materials found in most hardware and art supply stores. Step by step procedures are presented alongside theoretical explanations and historical background. Streamlined calotype procedures are demonstrated featuring different paper negative processes and overlooked developing out printing methods.

Primitive Photography combines the simplicity of pinhole photography the handmade quality of alternative processes and the precision of large format. For those seeking alternatives to commercially prepared material as well as digital photography it provides the instructions for creating the entire photographic process from the ground up. Given its scope and treatment of the photographic process as a whole this may be the first book of its kind to appear in over a century.

[Photographic Optics](#) Arthur Cox, 1971 [The Photographic Lens from the Historical Point of View](#) Reginald S. Clay, 1922 [The Photographic Instructor](#) Washington Irving Lincoln Adams, 1888 **The Photographic Times**, 1880 **The Photographic Lenses**

Ernesto Martinez, 2022-09-05 The objective or lens of our camera is the most important and delicate part of your photographic equipment. One of the differences between a compact camera and a SLR is the possibility of using high quality and interchangeable lenses. These lenses are designed and built especially for professional use; they symbolize the high range in terms of optical quality and versatility since you can use a specific lens for each type of photography or video. Once you have your first SLR camera you will have to look for a lens other than the one that came in the kit. When we are starting out it is perfectly understandable that we feel satisfied with our new SLR and a single lens with a more or less wide zoom and that it is enough to cover all our photographs. But as we progress as we aspire to grow in our training we think about what objective to put on our camera to replace complement or expand the ones we already have. There are objectives that provide added value. They are a tool that you can use to expand your creativity or even give your images a more professional touch. That is why I intend to expose and explain everything you need to know about the different types of photographic lenses that exist. We will examine all their hidden characteristics and a detailed review of the existing lens offers for sale their greater or lesser benefit and its influence on the type of photos we take. Photography is an exciting world an art that allows you to

treasure unique moments When you decide to take the leap and buy a reflex camera is when you begin to learn even more about the possibilities it offers thanks mainly to the use of high quality interchangeable lenses The series includes the following titles 1 Black and White Art 2 Color and Photography 3 The Exposure 4 Focus and Sharpness 5 Photographic Illumination 6 Composition and Photographic Language 7 The Digital Camera 8 Photographic Lenses 9 Practical guide of Lightroom 10 Photoshop for Photographers Contents The Importance of the Objective The Lens Groups The Target Mount The Luminosity of a Target The Diaphragm and the Numbers f The Image Stabilizer The Focus System How Does Autofocus Work Focus by phase detection or by contrast detection Hybrid Focus and Dual Pixel Minimum Focus Distance Classification by Types of Objectives Fixed Focal Objectives Variable Focal Objectives Special Objectives The Focal Length of the Objective Image Circle or Crop Factor Identification Elements in the Objectives Basic Terminology for Objectives Acronyms in Canon Nikon Pentax Tamron MTF Charts to Measure the Sharpness of a Target Objective Diffraction Equivalent Resolution and Apparent Resolution Choosing a Telephoto Lens Choice of All Terrain Objectives Choice of Wide Angle Objectives Choice of Macro Objectives

Photography Lens Louise Proehl,2021-05-20 All photographers know what a camera lens is If the camera is the brain then the lens is the eye It lets us view and capture our environment Some photographers find that the lens is more important than the camera Others believe that the camera s body functions and limitations are more important Either way read on to find out all the information you could possibly know about camera lenses This book builds a solid foundation of photographic knowledge with easy to follow discussions of everything that you need to know in order to get started with confidence This book is filled with charts illustrations and photos that take the discussion to new levels You will not only understand the terminology and techniques discussed but you will have a much better understanding of how your camera works and what is actually happening when you make adjustments The charts and photos should help you to retain what you learn and put it to good use immediately
