Wenger, James T. Townsend, 2005-04-11 Within the last three decades interest in the psychological experience of human faces has drawn together cognitive science researchers from diverse backgrounds Computer scientists talk to neural scientists who draw on the work of mathematicians who explicitly influence those conducting behavioral experiments The chapters in this volume illustrate the breadth of the research on facial perception and memory with the emphasis being on mathematical and computational approaches In pulling together these chapters the editors sought to do much more than illustrate breadth They endeavored as well to illustrate the synergies and tensions that inevitably result from adopting a broad view one consistent with the emerging discipline of cognitive science **A Stairway to Heaven: Daoist Self-Cultivation in Early Modern China** Paul van Enckevort, 2024-11-04 By the eleventh century communities of religious practitioners in China had developed a theory and practice of meditative self cultivation that combined the so called Three Teachings By the seventeenth century Wu Shouyang created a synthesis of the various lineages of this inner alchemy combining it with elements from Buddhism and Confucianism By the late nineteenth century his writings had become bestsellers in the genre and his became the standard account of this tradition This first book length English language study of Wu Shouyang s life and works introduces his remarkable life and formulates answers to fundamental questions about this important tradition Choice, Decision, and Measurement A.A.J. Monroe,1998 **In the Shadow of the Machine** Jeremy Naydler,2018-05-29 Contemporary life is so deeply reliant upon digital technology that the computer has come to dominate almost every aspect of our culture What is the philosophical and spiritual significance of this dependence on electronic technology both for our relationship to nature and for the future of humanity And what processes in human perception and awareness have produced the situation we find ourselves in As Jeremy Naydler elucidates in this penetrating study we cannot understand the emergence of the computer without seeing it within the wider context of the evolution of human consciousness which has taken place over millennia Modern consciousness he shows has evolved in conjunction with the development of machines and under their intensifying shadow The computer was the product of a long historical development culminating in the scientific revolution of the 17th century It was during this period that the first mechanical calculators were invented and the project to create more complex thinking machines began in earnest But the seeds were sown many hundreds of years earlier deep in antiquity Naydler paints a vast panorama depicting human development and the emergence of electronic technology His painstaking research illuminates an urgent question that concerns every living person today What does it mean to be human and what if anything distinguishes us from machines Circulars ,1884 **The Johns Hopkins University Circular** Johns Hopkins University,1884 Includes University catalogues President s report Financial report registers announcement material etc
