Engineering: An Introduction for High School Dale Baker, Tirupalavanam G, Annapurna Ganesh, 2010-09-05 The nature of engineering and its societal impact are covered as well as the educational and legal requirements needed to become an engineer Engineers contribute to the development of many innovations that improve life We investigate how engineers work to meet human needs great engineering accomplishments of the past and consider needs that engineering must meet in the future Engineering design process how it differs design processes and how the implementation of the design process effects the quality of the resulting design The application of the principles of mathematics and science to the creation or modification of components systems and processes for the benefit of society are covered with a focus on the balance between quality performance and cost How engineers use creativity and judgment to solve societal how problems complex engineering problems are usually solved by teams are covered as well as the intended desirable consequences and

unintended undesirable consequences of engineering *Design in the New Millennium* National Academy of Engineering, National Research Council, Commission on Engineering and Technical Systems, Aeronautics and Space Engineering Board, Committee on Advanced Engineering Environments, 2000-10-11 America is changing Many of the most noticeable changes in day to day life are associated with the advancing capabilities of computer systems the growing variety of tasks they can accomplish and the accelerating rate of change Advanced engineering environments AEEs combine advanced networked computer systems with advanced modeling and simulation technologies When more fully developed AEEs will enable teams of researchers technologists designers manufacturers suppliers customers and other users scattered across a continent or the globe to develop new products and carry out new missions with unprecedented effectiveness Business as usual however will not achieve this vision Government industry and academic organizations need to make the organizational and process changes that will enable their staffs to use current and future AEE technologies and systems Design in the New Millennium Advanced Engineering Environments Phase 2 is the second part of a two part study of advanced engineering environments The Phase 1 report issued in 1999 identified steps the federal government industry and academia could take in the near term to enhance the development of AEE technologies and systems with broad application in the U S engineering enterprise Design in the New Millennium focuses on the long term potential of AEE technologies and systems over the next 15 years This report calls on government industry and academia to make major changes to current organizational cultures and practices to achieve a long term vision that goes far beyond what current capabilities allow
