Year 5 Multiplication Colouring Sheets:

Junior Mathematical Dominoes Tracey Macdonald, 2021-07-02 This is a collection of photocopiable masters for Domino games for ages 7-11 on a variety of core topics. All the dominoes should form a continuous loop when each question is matched to its correct answer. This means that the students can self-assess their work to some extent, thus reducing workload for the teacher. They are ideal for revision and reinforcement. The games have been used to start lessons, end lessons on a bit of fun as a main activity and for end of term fun. They can either be prepared in advance, kept ready in the cupboard or cut out by students before trying to loop them. The students can even be involved in making their own sets which they get to use again, share with other classes or display on the wall.

Maths Action Plans David Clemson, Nelson, 2003-06 Maths Action Plans is a series of four books for Years 4-6, P5-7 offering flexible supportive teacher and pupil resources and coherent coverage of the five strands of the Framework for Teaching Mathematics. Mathematical Subjects Fiona Walls, 2009-08-10 Teaching and learning mathematics is a political act in which children, teachers, parents and policy makers are made visible as subjects. As they learn about mathematics, children are also learning about themselves: who they are, who they might become. We can choose to listen or not to what children have to say about learning mathematics. Such choices constitute us in relations of power. Mathematical know-how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well-being of nations. With the globalisation of education in an increasingly market-oriented world, mathematics has received intensified attention in the first decade of the twenty-first century with a shifting emphasis on utilitarian aspects of mathematics. This is reflected in the reconceptualisation of mathematical competence as mathematical literacy, loosely conceived as those ways of thinking, reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active, empowered and participatory citizens. It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide. We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks, raise standards, enhance achievement, close gaps and leave no child behind in mathematics education. Industries have sprung

up around the design administration and monitoring of standardised assessment to measure and compare children's mathematical achievement against identified benchmarks and each other *Queensland Targeting Maths: Teaching guide* Garda Turner, Gloria Harris, Robyn Hurley, 2004 **New South Wales Targeting Maths** Gloria Harris, Garda Turner, 2003
