INVESTIGATIONS EYE OF THE NEEDLE The Crash of British Airways Flight 38 Hans Griffioen, editor, 2012-11-01 On 28 November 2008 a Boeing 777 200ER operated by British Airways as flight BA38 on its way from Beijing China to London Heathrow suffered on approach to Heathrow Airport an in flight engine rollback At 720 feet agl the right engine ceased responding to autothrottle commands for increased power and instead the power reduced to 1.03 Engine Pressure Ratio (EPR) Seven seconds later the left engine power reduced to 1.02 EPR This reduction led to a loss of airspeed and the aircraft touching down some 330 m short of the paved surface of Runway 27L at London Heathrow The investigation identified that the reduction in thrust was due to restricted fuel flow to both engines It was determined that the restriction occurred most probably in the Fuel Oil Heat Exchangers The investigation identified the forming of ice in the fuel system as probable cause The aircraft was destroyed but there were no casualties Aviation Industry Trends - Technology Advancements.

Regulations, and Sustainability Zindoga Mukandavire, Hannah Al Ali, Kaitano Dube, 2025-10-12 Aviation Industry Trends Technology Advancements Regulations and Sustainability The 5th International Aviation Management Conference 2024 offers readers a comprehensive guide to sustainable aviation's current and future landscape Emerging from the 5th International Aviation Management Conference IAMC the proceedings provide an in depth understanding of the transformative developments reshaping the skies and how the industry is responding to the demands of governance in an era of technological sophistication The book examines the aviation industry's pivot towards sustainability and strategies intended to meet the ambitious goal of carbon neutrality It covers cutting edge advancements in aircraft technology exploring the electrification of planes the potential of hybrid systems and the growing realm of autonomous flight It looks at the groundbreaking improvements in aerodynamics the use of advanced lightweight materials and the revolutionary engine designs that set new fuel efficiency standards This volume is an essential read for industry professionals policymakers students researchers and aviation enthusiasts It provides a global view of how the industry can thrive while grounding its practices in ecological stewardship and regulatory compliance

Aviation and Human Factors Jose Sanchez-Alarcos, 2019-06-19. Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances of winning a jackpot in any of the major lotteries. However, keeping or improving that performance level requires a critical analysis of some events that despite scarce point to structural failures in the learning process. The effect of these failures could increase soon if there is not a clear and right development path. This book tries to identify what is wrong, why there are things to fix, and some human factors principles to keep in aircraft design and operations. Features: Shows through different events how the system learns through technology, practices, and regulations, and the pitfalls of that learning process. Discusses the use of information technology in safety critical environments and why procedural knowledge is not enough. Presents air safety management as a successful process, but at the same time, failures coming from technological and organizational features are shown. Offers ways to improve from the human factors side by getting the right lessons from recent events.
