**Enhancing conceptual understanding of variables with videos** Stefan Kortreff,2026-01-02 One of the most difficult instructional challenges in secondary mathematics education is enhancing low achieving students understanding of variables Although instructional videos have the potential to promote students understanding their effectiveness depends on empirically grounded content related designs that secure students conceptual focus and cognitive engagement This book addresses this issue using a sequential mixed methods approach that combines a design research study and a controlled trial An instructional design using interactive videos during the knowledge organization phase after students independent explorations was developed and investigated The qualitative analyses of students learning processes with the videos empirically substantiate the iterative redesign and allow generating hypotheses about effective scaffolding for cognitive engagement and conceptual focus through interactive features The subsequent randomized controlled trial shows the efficacy of the two phase instructional approach and validates the hypotheses for students who were cognitively engaged while working with the video

scientists and technicians remains high especially for positions that require employees to have a college degree and skills in math science and technology The pipeline into these jobs begins in high school but many leaks occur before young people reach the highly educated workforce needed to sustain leadership in science and technology Students drop out of the educational pipeline in science and technology at alarming rates at each educational transition beginning in high school but women and ethnic minority youth drop out at a faster rate Women and minorities are consistently underrepresented in science and engineering courses and majors They account for a small portion of the work force in high paying and more innovative jobs that require advanced degrees This schism between the skills necessary in our ever changing economy and the skill set that most young adults acquire is troubling It leads us to ask the question that forms the basis for this issue Why are adolescents and young adults particularly women and minorities opting out of the math science and technology pipeline The volume addresses gender and ethnic differences in the math science and technology pipeline from multiple approaches including theoretical perspectives a review of the work in this field presentation of findings from four longitudinal studies and a discussion of research implications given the current educational and economic climate This is the 110th issue of the Jossey Bass quarterly report series **New Directions for Child and Adolescent Development** **Il Te Test Prep Gr2 Math 04** HSP,2005-03 *Abstracts of Papers Presented to the American Mathematical Society* American Mathematical Society,2006
