

**Objectivity: An Introduction**

Students demonstrate an understanding of engineering problem-solving techniques simply from the knowledge already provided by learning the principles of thermodynamics. The key to understanding the introduction of design is to present the primary responsibility of an engineer. The typical engineering culture is to design, and design is the process of the synthesis that creates a new path, whereas analyzing is the process of defining an engineering problem based on existing or other given design, and it is more difficult than analyzing. Therefore, students will conclude, as they are experiencing, when applying design in a thermodynamic engineering process of analysis, it is possible to design a thermodynamic system, and analysis is the design for another student. In other words, it is possible to design design in the right sense and direction, making a design (thermodynamic).

The next objective of the lesson is to introduce design, which is a design solution to a problem. The next design is to design the following design in thermodynamics.

Design a thermodynamic system:

1. Design a thermodynamic system (thermodynamic system)

2. Design a thermodynamic system (thermodynamic system)

3. Design a thermodynamic system (thermodynamic system)

4. Design a thermodynamic system (thermodynamic system)

5. Design a thermodynamic system (thermodynamic system)

6. Design a thermodynamic system (thermodynamic system)

7. Design a thermodynamic system (thermodynamic system)
