A Review of the Environmental Protection Agency's Science to Achieve Results Research Program National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on the Review of Environmental Protection Agency's Science to Achieve Results Research Grants Program, 2017-08-24 Environmental research has driven landmark improvements that led to the protection of human and ecosystem health. Recognizing the value of knowledge generated by environmental research and the ingenuity within academic and nonprofit institutions, the US Environmental Protection Agency (EPA) created a program known as Science to Achieve Results (STAR) in 1995. STAR is EPA's primary competitive extramural grants program. A Review of the Environmental Protection Agency's Science to Achieve Results Research Program assesses the program's scientific merit, public benefits, and overall contributions in the context of other relevant research and recommends ways to enhance those aspects of the program. This report also considers the conclusions and recommendations of a prior National Research Council review of the STAR program (2003) the STAR program's research priorities in light of the nation's environmental challenges and the effects of recent STAR funding trends on obtaining scientific information needed to protect public health and the environment.

Design Science Research Aline Dresch, Daniel Pacheco Lacerda, José Antônio Valle Antunes Jr, 2014-08-19 Consolidating existing knowledge in Design Science this book proposes a new research method to aid the exploration of design and problem solving within business science and technology. It seeks to overcome a dichotomy that exists in the field between theory and practice to enable researchers to find solutions to problems rather than focusing on the explanation and exploration of the problems themselves. Currently, researchers concentrate on to describing, exploring, explaining and predicting phenomena and little attention is devoted to prescribing solutions. Herbert A. Simon proposes the need to develop a Science of the Artificial Design Science, arguing that our reality is much more artificial than natural. However, the research conducted on the Design Science premises has so far been scattered and erratic in different fields of research such as management systems, information and engineering. This book aims to address this issue by bringing these fields together and emphasising the need for solutions. This book provides a valuable resource to students and researchers of research methods, information systems management and management science and production and operations management.
