

**Abstract**

The service cluster is designed to be secure on the wall (up) and LAN interface. And they are focused in one case and mounted in the rack.

708 JOURNAL OF DOCUMENTATION

The TCU communicates with TCU (Transmission Control Unit), ECU, ESP+ECU and Instrument Cluster to let the driver select the desired transmission gear and to maintain the desired driving condition. Also, the tip switch is installed on the lever knob and the steering wheel so that the driver select the gear manually when the shift lever is in "N".

\_\_\_\_\_

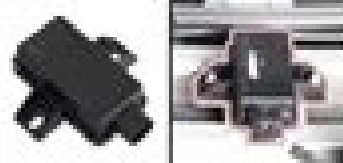

For the vehicle with the ABS, a speed difference between the wheels is not tolerable as all the wheels are slipping during abrupt braking. Therefore, the vehicle needs the speed information from other sensors other than the wheel speed sensor. The longitudinal acceleration sensor (G-sensor) is used for this case. It controls the ABS by using the signals from the sensor during abrupt braking and acceleration.

The transmission control unit (TCU) is installed under the driver seat, and controls the transmission. The TCU is operated by the system power supply and receives and processes the following information from the inner sensors through CAN buses.

1991-1992

The TPMS (SCU) is located in the rear bumper bar under the vehicle. It outputs the tire pressure and each wheel's condition to the instrument cluster, based on the wheel module information and CAN data.

**16,000 Vehicle With Automatic Transmission**

1. *Journal of the American Medical Association*, 1997; 277: 1039-1043.

Automatic transmission is available as 4WD- and 2WD-type and provides 4 speeds for forward travel and 1 reverse travel. It is also equipped with the torque converter with over lock-up clutch and electronically controlled selector which controls all hydraulic functions.

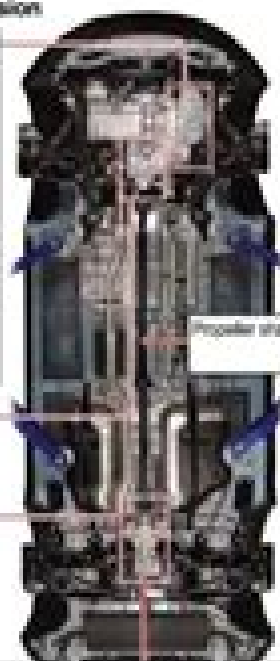

[illegible]

The PPU is a device that transfers the power generated from the engine to the rear axle through propeller shaft and E-coupling by changing the power flow direction by 90° in the front wheel drive type (FFV) vehicle.

100

It delivers the power to the rear axle from the PTO and controls the torque distribution between the front wheel and rear wheel.

The rear axle installed in this car is a reproducible axle, called RFA (Independent Rear Differential Axle). The rear differential center is installed directly in the sub frame, and there is an independent suspension that allows each wheel on the same axle to move vertically independently of each other with the universal joint and the slip joint.
