

HOW CARBON DIOXIDE
MADE OUR WORLD

The Story of CO₂ Is the Story of Everything

PETER BRANNEN

author of THE ENDS OF THE WORLD

Story Of Carbon

Eduard Strasburger

Story Of Carbon:

The Story of Carbon Mark Uehling, 1995-01-01 Discusses the chemical element carbon its forms uses and importance in our lives

The Carbon Age Eric Roston, 2010-08-09 What do bubbles in a soft drink a bullet proof vest a plastic chair and our DNA have in common Carbon It is and forever has been the ubiquitous architect of life and civilization forming the chemical backbone of every living creature And yet when we hear the word today it is more often than not in a crisis situation carbon dioxide emissions are destroying the ozone layer and warming the planet the volatile Middle East explodes atop its stores of hydrocarbons carbohydrates threaten obesity and diabetics Carbon thus sustains us and threatens us in equal measure Eric Roston illuminates this essential element in all its forms cleverly recreating the intricate carbon cycle on the page by tracing its journey from the Big Bang to Earth and its extraordinary infiltration of this planet and in time influence on humankind and civilization Evoking its ubiquity more than 99% of all 31 million known substances contain carbon Roston chronicles the ways we have used it often to surprising and sometimes to catastrophic effect having sped up the carbon cycle in the last two centuries we are now attempting to wrestle Earth's geochemical cycle back from the brink Blending the latest science with original reporting Roston makes us aware as never before of the seminal impact carbon has and has had on our lives

Carbon Bernadette Bensaude-Vincent, Sacha Loeve, 2024-06-07 Carbon is much more than a chemical element it is a polymorphic entity with many faces at once natural cultural and social Ranging across ten million different compounds carbon has as many personas in nature as it has roles in human life on earth And yet it rarely makes the headlines as anything other than the villain of our fossil based economy feeding an addiction which is driving dangerous levels of consumption and international conflict and which left unchecked could lead to our demise as a species But the impact of CO₂ on climate change only tells part of the story and to demonize carbon as an element which will bring about the downfall of humanity is to reduce it to a pale shadow of itself In this major new history of carbon Bernadette Bensaude Vincent and Sacha Loeve show that this omnipresent element is at the root of countless histories and adventures through time thanks to its extraordinary versatility Carbon has a long and prestigious CV its work and achievements extend far beyond the burning of fossil fuels The fourth most abundant element in the universe and the second most abundant element in the human body carbon is the chemical basis of all known life Carbon chemistry has a long history with applications ranging from jewellery to heating underpinning developments in metallurgy textiles pharmaceuticals electronics nanoscience and green technologies A biography of carbon transgresses the boundaries between chemical and social existence between nature and culture forcing us to abandon the simplified image of carbon as the anti hero of human civilization and enabling us to see instead the great diversity of carbon's modes of existence With scientific precision and literary flair Bensaude Vincent and Loeve unravel the surprising ways in which carbon has shaped our world showing how unrecognizable the earth would be without it Uncovering the many hidden lives of carbon allows us to view our own with fresh eyes

The Story of CO₂ Is the Story of

Everything Peter Brannen, 2026-08-11 How carbon dioxide made planet Earth shaped human history and now holds our future in the balance Every year we are dangerously warping the climate by putting gigantic amounts of carbon dioxide into the air But CO₂ isn't merely the by product of burning fossil fuels it is also fundamental to how our planet works All life is ultimately made from CO₂ and it has kept Earth bizarrely habitable for hundreds of millions of years In short it is the most important substance on Earth But how is it that CO₂ is as essential to life on Earth as it is capable of destroying it In *The Story of CO₂ Is the Story of Everything* award winning science journalist Peter Brannen reveals how carbon dioxide's movement through rocks air water and life has kept our planet's climate livable its air breathable and its oceans hospitable to complex life Starting at the dawn of life almost 4 billion years ago and working all the way up through today's global climate crisis and beyond he illuminates how CO₂ has been responsible for the planet's many deaths and rebirths for shaping the evolution of life and for the development of modern human society And he argues that it's only by reckoning with this planetary scale history that we can understand the cosmic stakes of our current moment on Earth and how dangerous our experiment with the climate really is Drawing on groundbreaking research and with a clear eyed perspective Brannen shows how a deep exploration of the carbon cycle can shed light on the way forward for humanity as we try to avert environmental catastrophe in the future And it all begins with a richer understanding of the critical role of CO₂ in our world **Carbon Is**

Life Ron House, 2014-02-18 CARBON IS LIFE is the must read book for everyone concerned with the environment and the wonderful creatures who share it with us The writer a trained scientist shows why carbon dioxide far from being pollution is actually the essential basis of life on Earth The book is written for the intelligent lay reader It shows with reference to thousands of peer reviewed scientific experiments how more carbon dioxide in the air will feed hundreds of millions of humans and untold numbers of wildlife This means that as a society we are currently setting up taxes on carbon that will force us to do exactly the opposite of what is needed to help the planet and ourselves These are huge and vitally important claims the truth of which would require us to completely reverse course on all our climate change policies Accordingly *Carbon Is Life* sets out the case in a clear and logical way so that the reader can verify the facts for him or herself But as important as the hard facts is the puzzle of how we could all come to believe the precise opposite of the truth To gain some insight into this the author explores our situation as members of a unique technological species and our exile from the natural world that followed from our technological mastery and which is portrayed symbolically in the story of the Garden of Eden The book ends with some suggestions from the author about our future and our choices as the thinking tool making language using record keeping technological star gazing story telling civilisation building species that nature made us
