Strange Traffic:

Weird Driving Marcus Blackwell, AI, 2024-10-16 Weird Driving takes readers on a fascinating journey through the world's most unusual traffic laws and driving customs. This unique travel reference explores the quirky, often humorous and sometimes baffling regulations that govern our roads across the globe. From the prohibition of driving blindfolded in Alabama to the ban on eating while driving in Cyprus, the book uncovers a wealth of strange vehicular traditions that reflect the diverse cultural, historical, and environmental factors shaping our driving experiences. The book is structured into four main sections: progressing from an introduction to weird driving laws and customs to specific examples grouped by themes, followed by an analysis of the reasons behind these rules and concluding with their implications for international travelers. By examining the evolution of driving laws since the advent of automobiles, Weird Driving argues that traffic regulations are not merely practical safety measures but windows into the unique values and beliefs of different societies. This perspective encourages readers to view driving as a cultural phenomenon, offering insights into the complex interplay between law, culture, and technology on our roads. What sets this book apart is its blend of serious analysis and entertaining anecdotes, making it an invaluable resource for travel enthusiasts, legal professionals, and cultural studies scholars alike. With its accessible language and engaging style, Weird Driving challenges readers to think critically about the rules they follow on the road, providing a newfound appreciation for the complexities and curiosities of global driving practices. Performance

Evaluation of Complex Systems: Techniques and Tools Maria Carla Calzarossa, Salvatore Tucci, 2003-08-02 This book presents the tutorial lectures given by leading experts in the area at the IFIP WG 7.3 International Symposium on Computer Modeling Measurement and Evaluation Performance 2002 held in Rome, Italy, in September 2002. The survey papers presented are devoted to theoretical and methodological advances in performance and reliability evaluation, as well as new perspectives in the major application fields. Modeling and verification issues, solution methods, workload characterization, and benchmarking are addressed from the methodological point of view. Among the applications dealt with are hardware and software architectures, wired and wireless networks, grid environments, Web services, and real-time voice and video processing. This book is intended to serve as a state-of-the-art survey and reference for students, scientists, and engineers active in the area of performance and reliability evaluation. **Computer Vision - ACCV 2010** Ron Kimmel, Reinhard Klette, Akihiro
