Investigating Human Error Barry Strauch, 2017-03-16 In this book, the author applies contemporary error theory to the needs of investigators and of anyone attempting to understand why someone made a critical error, how that error led to an incident or accident, and how to prevent such errors in the future. Students and investigators of human error will gain an appreciation of the literature on error with numerous references to both scientific research and investigative reports in a wide variety of applications from airplane accidents to bus accidents to bonfire disasters. Based on the author's extensive experience as an accident investigator and instructor of both aircraft accident investigation techniques and human factors psychology, it reviews recent human factors literature, summarizes major transportation accidents, and shows how to investigate the types of errors that typically occur in high risk industries. It presents a model of human error causation influenced largely by James Reason and Neville Moray, and relates it to error investigations with step by step guidelines for data collection and analysis that investigators can readily apply as needed. This second edition of *Investigating Human Error* has been brought up to date throughout with pertinent recent accidents and safety literature integrated. It features new material on fatigue, distraction (e.g. mobile phone and texting) and medication use. It also now explores the topics of corporate culture, safety culture and safety management systems. Additionally, the second edition considers the effects of the reduction in the number of major accidents on investigation quality, the consequences of social changes on transportation safety such as drinking and driving, cell phone use, etc., the contemporary role of accident investigation and the effects of the prosecution of those involved in accidents.

AIR CRASH INVESTIGATIONS EYE OF THE NEEDLE *The Crash of British Airways Flight 38* Hans Griffioen, editor, 2012-11-01 On 28 November 2008, a Boeing 777-200ER operated by British Airways as flight BA38 on its way from Beijing, China to London Heathrow suffered an approach to Heathrow Airport an in flight engine rollback. At 720 feet agl, the right engine ceased responding to autothrottle commands for increased power and

instead the power reduced to 1 03 Engine Pressure Ratio EPR Seven seconds later the left engine power reduced to 1 02 EPR This reduction led to a loss of airspeed and the aircraft touching down some 330 m short of the paved surface of Runway 27L at London Heathrow The investigation identified that the reduction in thrust was due to restricted fuel flow to both engines It was determined that the restriction occurred most probably in the Fuel Oil Heat Exchangers The investigation identified the forming of ice in the fuel system as probable cause The aircraft was destroyed but there were no casualties *Operational Safety for Aviation Managers* John Frearson,2024-11-28 Despite the vast amount of work building the foundations of safe operations aviation accidents still happen and prior to many accidents and other safety related events there was unexpressed or ignored disquiet as the last minute approached the last minute being that time when there is no longer time for discussion or analysis only safety first action This book aims at the assurance of better outcomes from these time critical situations whose genesis lies in the time period immediately preceding the last minute This assurance of better outcomes can best be assured by enabling operational managers to adopt new paradigms in the development of SOPs building the right culture and implementation of training programs relevant to good decision making required as the last minute approaches This book examines the development of the foundations for aviation safety the things that give foundational support for safety to pilots in particular but over which line pilots may have little knowledge or day to day control It provides a history of time critical safety related events providing the foundation for the understanding of the reasons why pilot inactivity indifference fixation and incapacitation can so pervade the lead up to the last minute as to leave the safe continuation of the flight resting on prompt remedial action The role of doubt how it is expressed and how it is heard is another central thread Finally the book addresses the role of flight data analysis as a valuable management tool Written for aviation managers line flight crews and those in similar operational roles in aviation related operations this book and its informal discussion style should appeal and communicate across national age experience and language boundaries to create a safer operational environment *A User's Guide to Engineering* James N.
