Coherence, Demographic Characteristics, and Career Thought Processes Among College Students with Disabilities

Wonsun Seo, 2010 This study examined the relationship between sense of coherence demographic characteristics and career thought processes among college students with disabilities based on Antonovsky's conceptual framework of sense of coherence. Participants were college students with disabilities collected through the Resource Center for Persons with Disabilities rcpcd at Michigan State University and other universities and colleges via a listserv of the Michigan Association on Higher Education and Disabilities mi ahead. Pearson Correlation Coefficient and forward stepwise regression analyses were carried out in order to find out the relationship between sense of coherence demographic characteristics (e.g., gender, race, and socioeconomic status) and career thought processes. Results supported that college students with disabilities who showed higher sense of coherence indicated less overall dysfunctional career thoughts, career decision making confusion, or career-related anxiety. In addition, the relationships between sense of coherence, career thoughts, and the demographic characteristics have been found. Implications for career development professionals as well as clinical considerations of caring for college students with disabilities experiencing career-related difficulties were discussed.
