Principles of Ionization

Water is a neutral molecule in which the hydrogen and oxygen atoms are covalently bonded together. It is the ionization of these atoms that gives water its acidic properties.

Water ionizes to form a hydrogen ion and a hydroxide ion. The concentration of these ions is equal to one another. The concentration of hydrogen ions is 10^{-7} M.

Hydrogen ions are very small and have a positive charge. They are able to attract the negative oxygen atoms of water molecules. This attraction is called ion-dipole attraction. It is this attraction that causes water to ionize.
