*Relational Frame Theory* Steven C. Hayes, Dermot Barnes-Holmes, Bryan Roche, 2005-11-30 This volume goes beyond theory and gives the empirical and conceptual tools to conduct an experimental analysis of virtually every substantive topic in human language and cognition both basic and applied It challenges behavioral psychology to abandon many of the specific theoretical formulations of its most prominent historical leader in the domain of complex human behavior especially in human language and cognition and approach the field from a new direction It will be of interest to behavior theorists cognitive psychologists therapists and educators **The Complex Mind** David McFarland, Keith Stenning, Maggie McGonigle, 2012-05-17 Combining the study of animal minds artificial minds and human evolution this book examines the advances made by comparative psychologists in explaining the intelligent behaviour of primates the design of artificial autonomous systems and the cognitive products of language evolution **The Making of Human Concepts** Denis Mareschal, Paul C. Quinn, S. E. G. Lea, 2010 Human adults appear different from other animals in their ability to form abstract mental representations that go beyond perceptual similarity In short they can conceptualize the world This apparent uniqueness leads to an immediate puzzle WHEN and HOW does this abstract system come into being To answer this question we need to explore the origins of adult concepts both developmentally and phylogenetically When does the developing child acquire the ability to use abstract concepts Does the transition occur around 2 years with the onset of symbolic representation and language Or is it independent of the emergence of language When in evolutionary history did an abstract representational system emerge Is there something unique about the human brain How would a computational system operating on the basis of perceptual associations develop into a system operating on the basis of abstract relations Is this ability present in other species but masked by their inability to verbalise abstractions Perhaps the very notion of concepts is

empty and should be done away with altogether This book tackles the age old puzzle of what might be unique about human concepts Intuitively we have a sense that our thoughts are somehow different from those of animals and young children such as infants Yet if true this raises the question of where and how this uniqueness arises What are the factors that have played out during the life course of the individual and over the evolution of humans that have contributed to the emergence of this apparently unique ability This volume brings together a collection of world specialists who have grappled with these questions from different perspectives to try to resolve the issue It includes contributions from leading psychologists neuroscientists child and infant specialists and animal cognition specialists Taken together this story leads to the idea that there is no unique ingredient in the emergence of human concepts but rather a powerful and potentially unique mix of biological abilities and personal and social history that has led to where the human mind now stands A must read for students and researchers in the cognitive sciences     Advances in Relational Frame Theory Simon Dymond, Bryan Roche, 2013-05-01 Edited by leading relational frame theory RFT scholars Simon Dymond PhD and Bryan Roche PhD Advances in Relational Frame Theory presents advances in all aspects of RFT research over the last decade and provides mental health professionals a greater understanding of the core principals of acceptance and commitment therapy ACT A must read for anyone interested in ACT the book contains chapters written by Steven C Hayes and Kelly Wilson both research active experts from the RFT community around the world     Learning and Memory: A Comprehensive Reference , 2017-07-07 Learning and Memory A Comprehensive Reference Second Edition Four Volume Set is the authoritative resource for scientists and students interested in all facets of learning and memory This updated edition includes chapters that reflect the state of the art of research in this area Coverage of sleep and memory has been significantly expanded while neuromodulators in memory processing neurogenesis and epigenetics are also covered in greater detail New chapters have been included to reflect the massive increase in research into working memory and the educational relevance of memory research No other reference work covers so wide a territory and in so much depth Provides the most comprehensive and authoritative resource available on the study of learning and memory and its mechanisms Incorporates the expertise of over 150 outstanding investigators in the field providing a one stop resource of reputable information from world leading scholars with easy cross referencing of related articles to promote understanding and further research Includes further reading for each chapter that helps readers continue their research Includes a glossary of key terms that is helpful for users who are unfamiliar with neuroscience terminology     **Journal of the Experimental Analysis of Behavior** , 1991     American Journal of Mental Deficiency , 1982 Includes the association s conference proceedings and addresses     Learning and Memory: Learning theory and behaviour John H.
