Foundations of European Central Bank Policy Wolfgang Gebauer, 2013-03-09 European central bank policy is already taking place today in an informal way It comprises in short European exchange rate management and interest rate policy decisions within and without the European Monetary System EMS A focal point of such policy actions are the money market operating targets of European Central Banks Those central bank policies appear to be dominated however by the Deutsche Bundesbank This has caused recurring critical discussion of European asymmetries and German leadership in monetary stabilization pOlicies before and after the EMS turbulences of September 1992 However it should be pointed out that German dominance has increasingly evolved in a cooperative way ever since the Committee of European Central Bank Governors began to meet regularly in 1964 the Basle Nyborg accord of 1987 formed a further stage of cooperative efforts within the EMS Presently a small group of countries including Benelux and Austria generally follows after prior concertation German monetary policy patterns In this narrow sense there exists a European central bank policy within a Deutsche Mark Zone In a broader sense European central bank policy is shaped after proper consultation by monetary cooperation between the larger EMS countries but once again dominantly influenced by Germany recent problems of highjinterest rates in France and elsewhere due to relative restrictive German monetary pOlicies are striking examples German monetary dominance in the narrow or broad sense obviously creates in the long run an untenable situation in the eyes of European partner countries

The Econometrics of Macroeconomic Modelling Gunnar Bårdsen, Øyvind Eitrheim, Eilev Jansen, Ragnar Nymoen, 2005-04-14 Macroeconometric models in many ways the flagships of the economist s profession in the 1960s came under increasing attack from both theoretical economist and practitioners in the late 1970s Critics referred to their lack of microeconomic theoretical foundations ad hoc models of expectations lack of identification neglect of dynamics and non stationarity and poor forecasting properties By the start of the 1990s the status of macroeconometric models had declined markedly and had fallen completely out of and with academic economics Nevertheless unlike the dinosaurs to which they often have been likened macroeconometric models have never completely disappeared from the scene This book describes how and why the discipline of macroeconometric modelling continues to play a role for economic policymaking by adapting to changing demands in response for instance to new policy regimes like inflation targeting Model builders have adopted new insights from economic theory and taken advantage of the methodological and conceptual advances within time series econometrics over the last twenty years The modelling of wages and prices takes a central part in the book as the authors interpret and evaluate the last forty years of international research experience in the light of the Norwegian main course

model of inflation in a small open economy The preferred model is a dynamic model of incomplete competition which is evaluated against alternatives as diverse as the Phillips curve Nickell Layard wage curves the New Keynesian Phillips curve and monetary inflation models on data from the Euro area the UK and Norway The wage price core model is built into a small econometric model for Norway to analyse the transmission mechanism and to evaluate monetary policy rules The final chapter explores the main sources of forecast failure likely to occur in a practical modelling situation using the large scale model RIMINI and the inflation models of earlier chapters as case studies

A History of Econometrics R.J. Epstein, 2014-06-28 This comparative historical study of econometrics focuses on the development of econometric methods and their application to macroeconomics The analysis covers the origins of modern econometrics in the USA and Europe during the 1920 s and 30 s the rise of structural estimation in the 1940 s and 50 s as the dominant research paradigm and the crisis of the large macroeconomic models in the 1970 s and 80 s The completely original feature of this work is the use of previously unknown manuscript material from the archives of the Cowles Commission and other collections The history so constructed shows that recent debates over methodology are incomplete without understanding the many deep criticisms that were first raised by the earliest researchers in the field

Satrovic, 2018-09-10 Document from the year 2018 in the subject Economics Finance grade 14 University of Sarajevo language English abstract In this book linear panel data estimators are employed to investigate the relationship between life insurance and economic growth This study contributes to previous studies by using Maximum likelihood estimation of dynamic panel that was not used in previous studies concerning the aforementioned relationship by controlling for number of factors thought to influence economic growth by referring to a much larger number of countries and by exploring the relationship between life insurance and economic growth while controlling for the degree of financial sector development as well as for the regional and income disparities Sixteen models that explore the impact of control variables integrated singly in the equations and an integrated model that controls for the impact of all key variables are estimated Empirical results reveal a significant positive relationship between life insurance and economic growth in models Education is reported to have a positive impact on economic growth Government spending is found to have a negative impact on economic growth while model reports that inflation has a negative impact on economic growth Trade openness is not reported to have a significant

impact on economic growth in model Model reveals a significant positive impact of banking sector on economic growth significant negative impact of non life insurance sector while stock market is not reported to have a significant impact An integrated model that controls for the impact of all key variables gives a strong support to the results obtained in models Results of models that attempt to control for the importance of regional disparities indicate that a significant positive relationship between life insurance and economic growth is reported for all regions but South Asia and North America Models that additionally control for differences in levels of development reveal a significant positive relationship between life insurance and economic growth in high middle and low income countries
