Decontamination and Device Processing in Healthcare

Processing in Healthcare Gerald E. McDonnell, Georgia Alevizopoulou, 2025-05-27. Prevent infections within healthcare spaces with safe and effective device decontamination and processing. Prevention is the first line of defense against infection, particularly in a world where microbial resistance to anti-infectives like antibiotics is a growing threat. Few aspects of managing a healthcare facility are more immediately important to patient care than the safe use of equipment and devices. Although some devices are designed for single use, many more are designed to be reused, and there have been increasing reports of infections and other adverse patient reactions due to these devices in particular when regarding surgical and endoscopic procedures. The decontamination or processing of various surfaces, spaces, and devices associated with patient care is a life-saving discipline demanding dedicated resources and education. Decontamination in Healthcare meets this demand as a comprehensive training and reference manual for the decontamination and processing of equipment and devices used in patient care environments. This book is ideal for medical staff involved in the management of devices within healthcare facilities, including those purchasing, using, and processing devices on patients and those responsible for their safety. Now fully updated to reflect the latest international regulations, standards, and best practices, this text is an invaluable tool for meeting the challenges of the modern medical facility. Readers of the second edition of Decontamination in Healthcare will also find within the text up-to-date information based off the current guidelines, standards, and regulations of Regulatory organizations, including the US FDA, EU MDR, NMPA, and other similar international organizations. Standard organizations, including ISO, CEN, AAMI, BSI, DIN, and international professional organizations in device processing (WFHSS, HPSA, CAMDR, etc.), nursing (AORN, EORNA, ESGENA), infection prevention and control, essentials of anatomy and microbiology, safety, endoscopy, and outpatient areas, quality management, and many more. Description of the steps in device processing, ranging from equipment to surgical devices, including cleaning, disinfection, and sterilization. Information written to be of value to
