Lodato,2014-02-26 In a very real sense Michael Lodato has been working on this handbook for over 45 years starting in 1968 when as a new CEO of a small consulting company he attended a seminar on strategic planning at UCLA The resulting strategy helped run the company but also served as the first template for his strategic planning methodology Over the years as a result of working on real issues faced by him as an executive and client corporations the template expanded to add tactical planning and features to handle changes in the business environments that may be coming or have already occurred to quickly assess the impact of such changes on success and to adapt to the new realities by making changes to its strategies tactics and processes in time avoid bad results In short he added agility to the template that is the substance of this handbook This is not a text book or a book on strategic management theory It is a step by step here s how to do it guide to achieving agile strategic management All of this growth in the strategic management processes came not as an academic activity It is written for people who do or aspire to do the work of strategic management As you learn about the processes and read stories about how they have applied to a wide range of situations think through how you might apply them to the situations issues and opportunities you face They are intended to help you unleash the talent that resides in your team and organization The resulting methodology includes processes that guide all the work of strategic management at all levels from strategic through tactical and down to individual action items in such a way that there is a strong interdependence among them **Sustainable Process Engineering** David Brennan,2012-10-01 This book introduces chemical engineering students to key concepts strategies and evaluation methods in sustainable process engineering The book is intended to supplement chemical engineering texts in fundamentals and design rather than replace them The key objectives of the book are to widen system boundaries beyond a process plant to include **A Process Engineering Research Strategy for the 1990s** Science and Engineering Research Council (Great Britain),1993\*
