*Efficacy of Stress Inoculation Training in improving the overall well-being of school students* Dr. Bani LekhaPhukan Dr. K. ArockiaMaraichelvi,    *The Effect of Stress Inoculation Training on Anxiety and Performance* ,1996 The development of effective training procedures to prepare the individual to resist the negative impact of stress is of considerable interest to government and industry Stress inoculation training is a cognitive behavioral stress intervention that has shown considerable promise however a number of questions arise regarding the application of this clinically based approach to more applied settings A meta analysis was conducted to determine the overall effectiveness of stress inoculation training and to identity conditions that may moderate the effectiveness of this approach Results indicated that stress inoculation training was an effective means for reducing performance anxiety reducing state anxiety and enhancing performance under stress

Furthermore the examination of moderators such as the experience of the trainer the type of setting in which training was implemented and the type of trainee population revealed no significant limitations on the application of stress inoculation training to normal training environments

**Anxiety Management Training** Richard M. Suinn,2013-11-11 This book owes its existence to an ideal a burning frustration and a trusted believer The ideal was the sense that governed my feelings about systematic desensitization during my early introduction to its benefits It is hard to put into words the initial doubts that pervaded me during my first attempt with desensitization with a seriously phobic client as I religiously worked my way through the procedure Will this client really become relaxed And then what will the visualization actually occur And then what will the fear really vanish just like that And oh the feeling of discovery and validation when indeed the process worked and worked well Desensitization was everything it was claimed to be systematic clean theoretically grounded empirically tested applicable as a behavioral technology regardless of one's own theoretical bias And there were testable outcomes concrete evidence for change So I became invested and aimed at doing more with desensitization My students and I raised some theoretical questions in order to open the doors for revising the desensitization to improve on its applications We tested the rapidity with which desensitization could be accomplished shortening the time by shortening the anxiety hierarchy Along with others we studied the question of group delivery and reducing the total number of sessions as well as examining the use of audiotaped delivery of services
