Wolfgang Schoppek,Joachim Funke,Magda Osman,Annette Kluge,2018-09-28 Complex problem solving CPS and related topics such as dynamic decision making DDM and complex dynamic control CDC represent multifaceted psychological phenomena In a broad sense CPS encompasses learning decision making and acting in complex and dynamic situations Moreover solutions to problems that people face in such situations are often generated in teams or groups This adds another layer of complexity to the situation itself because of the emerging issues that arise from the social dynamics of group interactions This framing of CPS means that it is not a single construct that can be measured by using a particular type of CPS task e.g. minimal complex system tests which is a view taken by the psychometric community The proposed approach taken here is that because CPS is multifaceted multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other Thus this Research Topic is aimed at showcasing the latest work in the fields of CPS as well as DDM and CDC that takes a holistic approach to investigating and theorizing about these abilities The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS DDM and CDC This work contributes to answering

questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another what learning conditions result in transferable knowledge and skills and how these features can be trained **Strategies for Creative Problem Solving** H. Strategies of Problem Solving Maria Nogin, 2014-06-24 Solving mathematical problems is both a science and an art It is a science because we need to learn some basic concepts and skills and use proper terminology when explaining our solution to other people It is also an art because very often we need to be creative There are infinitely many types of math problems and it is impossible to learn how to solve every problem in the world However there are a few basic principles that

are good to know There are a few approaches and methods that are often useful In this book we discuss the major ones including various types of proofs the pigeon hole principle the principle of mathematical induction invariants coloring etc In each chapter we provide basic definitions and facts to get you started We do not prove most of the well known facts given in this book since our main goal is to learn how to solve problems i e use these facts They are usually proved in other college courses such as abstract algebra number theory and analysis Sometimes however the idea of a proof of a theorem can be used for solving many problems In such cases we provide the proof The book contains over 300 problems on various topics and detailed solutions of approximately half of them This book is primarily intended for high school and college students and mathematics teachers Most chapters are accessible to middle school students as well It would especially be helpful for those competing in mathematics contests and wishing to improve their problem solving skills The first edition contained some minor errors which have been fixed in the second edition More problems were also added
