**The Acquisition of Strategic Knowledge**

Thomas R. Gruber,2013-07-10

The Acquisition of Strategic Knowledge deals with the automation of the acquisition of strategic knowledge and describes a knowledge acquisition program called ASK which elicits strategic knowledge from domain experts and puts it in operational form This book explores the dynamics of intelligent systems and how the components of knowledge systems including a human expert interact to produce intelligence Emphasis is placed on how to represent knowledge that experts require to make decisions about actions The move toward abstract tasks and how tasks are solved are discussed along with their implications for knowledge acquisition particularly the acquisition of expert strategies This book is comprised of eight chapters and begins with an overview of the knowledge acquisition problem for strategic knowledge as well as the relevance of strategic knowledge to artificial intelligence The next chapter describes a dialog session between the ASK knowledge acquisition assistant and the user the expert The discussion then turns to software architecture with which to represent strategic knowledge design and implementation of an assistant for acquiring strategic knowledge and approaches to knowledge acquisition Two applications of the ASK system are considered to evaluate the usability of the elicitation technique with real users and to test the adequacy of the strategy rule representation upon which the approach is dependent The scope of ASK its sources of power and its underlying assumptions are also outlined This monograph will be a valuable resource for knowledge systems designers and those interested in artificial intelligence and expert systems

*Knowledge Acquisition: Selected Research and Commentary* Sandra Marcus,2012-12-06

What follows is a sampler of work in knowledge acquisition It comprises three technical papers and six guest editorials The technical papers give an in depth look at some of the important issues and current approaches in knowledge acquisition The editorials were produced by authors who were basically invited to sound off I've tried to group and order the contributions somewhat coherently The following annotations emphasize the connections among the separate pieces Buchanan's editorial starts on the theme of Can machine learning offer anything to expert systems He emphasizes the practical goals of knowledge acquisition and the challenge of aiming for them Lenat's editorial briefly describes experience in the development of CYC that straddles both fields He outlines a two phase development that relies on an engineering approach early on and aims for a crossover to more automated techniques as the size of the knowledge base increases Bareiss Porter and Murray give the first technical paper It comes from a laboratory of machine learning researchers who have taken an interest in supporting the development of knowledge bases with an emphasis on how development changes with the growth of the knowledge base The paper describes two systems The first Protos adjusts the training it expects and the assistance it provides as its knowledge grows The second KI is a system

that helps integrate knowledge into an already very large knowledge base      **Framework, Methods and Tools for Acquiring and Sharing Strategic Knowledge of the Competitive Environment** Katja Rajaniemi, Tom Wingren, 2005

*Profiting from external knowledge* Maarten Batterink, 2023-08-28 Innovation managers and innovation scholars increasingly emphasize the open innovation model introduced by Henry Chesbrough in 2003. This model postulates that the innovation process should be flexible and cross organizational boundaries which enables the transfer of knowledge and capabilities between organizations. However, until now it remained unclear which types of firms apply open innovation, whether it really raises their performance and how this can be managed in the best way. This book addresses the important issue how innovative firms profit from external knowledge to improve their innovation performance. Using large scale empirical evidence from the Dutch industry, this book shows that especially Small and Medium sized Enterprises (SMEs) and firms from low tech sectors have increasingly adopted open innovation strategies over the period 1994-2004 and are clearly catching up large and high tech firms. The results indicate that firms pursuing an open innovation strategy perform better with regard to innovation than firms that innovate exclusively in house. In contrast to the common opinion that large Mergers and Acquisitions (MAs) are bad for innovation, it turns out that MAs have a positive impact on long term innovation performance. In times of economic crisis, this can be an extra argument for governments to back large scale MAs. Large medium high tech MAs in the life sciences industry were analysed in depth to investigate the dynamics of post MA integration. This book shows the different types of innovation synergies that can be expected from MAs and how they can be realized by systematic post MA integration. Finally, this book studies how innovation brokers fulfill essential roles in innovation networks of SMEs in the agri food sector. It provides guidelines for managers in innovation networks to improve the performance of these networks.

**Advanced Learning Strategies** Alfreda Breon, 2021-08-12 Accelerated learning is a learning format that allows students to complete courses in a shorter period of time compared to a traditional semester. Accelerated learning is a multi-dimensional approach to learning where students can control the speed and method in which they are instructed. This boxset includes the most transformational collection of the top books to help you learn everything about the secrets of effective knowledge acquisition. It will allow you to delve deeper into the concept of accelerated and autodidactic learning. It will help you to apply the techniques others might already use to their advantage. It's a great resource to 3x your learning speed and to fine tune your memory for quick access to complex information at all times.

**Multiple Knowledge Acquisition Strategies in MOLTKE** Klaus Dieter Althoff, 1990      **Emergent Knowledge Strategies** Ettore Bolisani, Constantin Bratianu, 2017-07-06 This book is intended to spark a discourse on and contribute to finding a clear consensus in the debate between conceptualizing a knowledge strategy and planning a knowledge strategy. It explores the complex relationship between the notions of knowledge and strategy in the business

context one that is of practical importance to companies After reviewing the extant literature the book shows how the concept of knowledge strategies can be seen as a new perspective for exploring business strategies It proposes a new approach that clarifies how planned and emergent knowledge strategies allow companies to make projections into the uncertain and unpredictable future that dominates today's economy Knowledge Life Cycle, Knowledge Inventory, and Knowledge Acquisition Strategies Andrew N. K. Chen, Yuhchang Hwang, T. S. Raghu, 2011 For a knowledge and skill centric organization the process of knowledge management encompasses three important and closely related elements i task assignments ii knowledge acquisition through training and finally iii maintaining proper level of knowledge inventory among the existing workforce Tradeoff on choices between profit maximization in the short run and agility and flexibility in the long term is a vexing problem in knowledge management In this study we examine effects of different training strategies on short term operational efficiency and long term workforce flexibility We address our research objective by developing a computational model for task and training assignment in a dynamic knowledge environment consisting of multiple distinct knowledge dimensions Overall we find that organizational slack is an important variable in determining the effectiveness of training strategies Training strategies focused on the most recent skills are found to be the preferable option in most of the considered scenarios Interestingly increased efficiencies in training can actually create preference conflict between employees and the firm Our findings indicate that firms facing longer knowledge lifecycles higher slack in workforce capacity and better training efficiencies actually face more difficult challenges in knowledge management Knowledge Acquisition Strategies from Multiple Stakeholders M. Hendriks, 2012 To fuel their innovative efforts companies are in a constant race to source knowledge to respond to the latest developments in their industry support strategic goals and maintain sustained success Companies acquire knowledge from external knowledge sources by interacting with multiple stakeholders Various scholars already did some research related to this topic however not much have been written on knowledge sources degree of formality and stakeholder characteristics and resources Therefore in this study we explore how when and why companies acquire knowledge from different stakeholders and which impact the stakeholder characteristics have on the knowledge acquisition process Following an inductive case study based grounded theory approach we analysed the evidence collected from small knowledge intensive innovative companies in the high tech sector The analysis leads to the following results First we found that the sampled companies acquire external knowledge by using formal and informal knowledge acquisition strategies but in general with a higher degree of formality Second the stakeholder characteristics have some impact on the knowledge acquisition strategies We found that power and legitimacy play a role within the knowledge acquisition process but that urgency doesn't emerge The results of this study are useful for start up companies that are looking for a way of organizing and strategizing their knowledge acquisition from outside the company boundaries Given the explanatory nature of the grounded theory approach we used we recognize that the propositions in this research should be tested in further

research to provide strong evidence      Exemplar-based Knowledge Acquisition Ray Bareiss,1989 Learning from past experiences is a fundamental element of intelligent behavior An important organizing principle of such learning is that common experiences are collected into categories or cases Despite its simple description this principle is surprisingly difficult to implement computationally This book describes the design implementation and experimental evaluation of the Protos knowledge acquisition system a practical tool for the construction of knowledge based programs Protos is a case based learning apprentice that learns by solving problems under the guidance of an expert teacher      **Explicit**

**Representations of Problem-solving Strategies to Support Knowledge Acquisition** University of Southern California. Information Sciences Institute,Yolanda Gil,1996 Abstract Role limiting approaches support knowledge acquisition KA by centering knowledge base construction on common types of tasks or domain independent problem solving strategies Within a particular problem solving strategy domain dependent knowledge plays specific roles A KA tool then helps a user to fill these roles Although role limiting approaches are useful for guiding KA they are limited because they only support users in filling knowledge roles that have been built in by the designers of the KA system EXPECT takes a different approach to KA by representing problem solving knowledge explicitly and deriving from the current knowledge base the knowledge gaps that must be resolved by the user during KA This paper contrasts role limiting approaches and EXPECT s approach using the propose and revise strategy as an example EXPECT not only supports users in filling knowledge roles but also provides support in 1 adapting the problem solving strategy 2 changing the types of information to be acquired about a knowledge role 3 adding new knowledge roles and 4 acquiring additional background information about the domain needed by the knowledge based system EXPECT s guidance changes as the knowledge base changes providing a more flexible approach to knowledge acquisition This work provides evidence supporting the need for explicit representations in building knowledge based systems      *Third Annual Expert Systems in Government Conference* H.
