made since the publication of the first edition the world is increasingly characterized by division rising dissatisfaction and growing inequality between countries communities and people At the same time it is anticipated that global warming will reach a point of no return between 2030 and 2052 The fundamental paradigm shift in the way the development process must be navigated is better served by a holistic and inclusive multilevel and multidimensional approach meant to gradually align the critical institutional and individual factors essential to the pathway toward sustainable development The book has been established as an excellent primer to explain the complex issues around sustainability for postgraduate and undergraduate students as well as busy professionals and those already in management and leadership positions in the private public or non profit sectors
