

# 737-700/800

## Flight Crew Operations Manual

"These observations from RGA-2 show much of the same in the case of the *Yersinia enterocolitica* strain Phage-103, RGA-2, RGA-3, and RGA-4. The results of these investigations are summarized under the heading Phage-103. The results of the RGA-2 and RGA-3 strains show that the RGA-2 and RGA-3 phage strains have many similarities with the RGA-1 phage, particularly in the structure of the phage, production of capsid by fibrous structures, their specific enzymes, the sensitivity of the phage to the antibiotics, and the specificity of the phage to *Y. enterocolitica* strains.

These observations indicate a progressive softening around the 1000-1500 nm region, and the peak at 1650 nm is also very broad, suggesting that the absorption band may be composed of a number of overlapping peaks.
