Slope Tectonics Michel Jaboyedoff,2011 Usually geomorphology structural
geology and engineering geology provide descriptions of slope instability in quite distinctive ways This new research is based
on combined approaches to providing an integrated view of the operative slope processes Slope Tectonics is the term
adopted here to refer to those deformations that are induced or fully controlled by the slope morphology and that generate
features which can be compared to those created by tectonic activity Such deformation can be induced by the stress field in a
slope which is mainly controlled by gravity topography and the geological setting created by the geodynamic context The
content of this book includes slope deformation characterization using morphology and evolution mechanical behaviour of
the material modes of failure and collapse influence of lithology and structural features and the role played by controlling
factors The contributions cover broad aspects of slope tectonics that attempt to underline a multidisciplinary approach which
should create a better framework for studies of slope instability
