Subjective Probability Richard Jeffrey, 2004-04-12 Sample Text      *Subjective Probability* Richard Jeffrey, 2004-04-12 A concise survey of basic probability theory from a thoroughly subjective point of view      **Induction and Deduction in the Sciences** Friedrich Stadler, 2004-04-30 The articles in this volume deal with the main inferential methods that can be applied to different kinds of experimental evidence These contributions accompanied with critical comments by renowned scholars in the field of philosophy of science aim at removing the traditional opposition between inductivists and deductivists They explore the different methods of explanation and justification in the sciences in different contexts and with different objectives The volume contains contributions on methods of the sciences especially on induction deduction abduction laws probability and explanation ranging from logic mathematics natural to the social sciences They present a highly topical pluralist re evaluation of methodological and foundational procedures and reasoning e g focusing in Bayesianism and Artificial Intelligence They document the second international conference in Vienna on Induction and Deduction in the Sciences as part of the Scientific Network on Historical and Contemporary Perspectives of Philosophy of Science in Europe funded by the European Science Foundation ESF      *Theories of Scientific Method* Robert Nola, Howard Sankey, 2014-12-18 What is it to be scientific Is there such a thing as scientific method And if so how might such methods be justified Robert Nola and Howard Sankey seek to provide answers to these fundamental questions in their exploration of the major recent theories of scientific method Although for many scientists their understanding of method is something they just pick up in the course of being trained Nola and Sankey argue that it is possible to be explicit about what this tacit understanding of method is rather than leave it as some unfathomable mystery They robustly defend the idea that there is such a thing as scientific method and show how this might be legitimated This book begins with the question of what methodology might mean and explores the notions of values rules and principles before investigating how methodologists have sought to show that our scientific methods are rational Part 2 of this book sets out some principles of inductive method and examines its alternatives including abduction IBE and hypothetico deductivism Part 3 introduces probabilistic modes of reasoning particularly Bayesianism in its various guises and shows how it is able to give an account of many of the values and rules of method Part 4 considers the ideas of philosophers who have proposed distinctive theories of method such as Popper Lakatos Kuhn and Feyerabend and Part 5 continues this theme by considering philosophers who have proposed naturalised theories of method such as Quine Laudan and Rescher This book offers readers a comprehensive introduction to the idea of scientific method and a wide ranging discussion of how historians of science philosophers of science and scientists have grappled with the question over the last fifty years      *Cambridge and Vienna* Maria C. Galavotti, 2006-07-10 The Institute Vienna Circle held a conference in Vienna in 2003 Cambridge and Vienna Frank P Ramsey and the Vienna Circle to commemorate the philosophical and scientific work of Frank Plumpton Ramsey 1903 1930 This Ramsey conference provided not only historical

and biographical perspectives on one of the most gifted thinkers of the Twentieth Century but also new impulses for further research on at least some of the topics pioneered by Ramsey whose interest and potential are greater than ever Ramsey did pioneering work in several fields practitioners of which rarely know of his important work in other fields philosophy of logic and theory of language foundations of mathematics mathematics probability theory methodology of science philosophy of psychology and economics There was a focus on the one topic which was of strongest mutual concern to Ramsey and the Vienna Circle namely the question of foundations of mathematics in particular the status of logicism Although the major scientific connection linking Ramsey with Austria is his work on logic to which the Vienna Circle dedicated several meetings certainly the connection which is of greater general interest concerns Ramsey's visits and discussions with Wittgenstein Ramsey was the only important thinker to actually visit Wittgenstein during his school teaching career in Puchberg and Ottertal in the 1920s in Lower Austria and later Ramsey was instrumental in getting Wittgenstein positions at Cambridge

How Humans Recognize Objects: Segmentation, Categorization and Individual Identification Chris Fields, 2016-08-18

Human beings experience a world of objects bounded entities that occupy space and persist through time Our actions are directed toward objects and our language describes objects We categorize objects into kinds that have different typical properties and behaviors We regard some kinds of objects each other for example as animate agents capable of independent experience and action while we regard other kinds of objects as inert We re identify objects immediately and without conscious deliberation after days or even years of non observation and often following changes in the features locations or contexts of the objects being re identified Comparative developmental and adult observations using a variety of approaches and methods have yielded a detailed understanding of object detection and recognition by the visual system and an advancing understanding of haptic and auditory information processing Many fundamental questions however remain unanswered What for example physically constitutes an object How do specific classically characterizable object boundaries emerge from the physical dynamics described by quantum theory and can this emergence process be described independently of any assumptions regarding the perceptual capabilities of observers How are visual motion and feature information combined to create object information How are the object trajectories that indicate persistence to human observers implemented and how are these trajectory representations bound to feature representations How for example are point light walkers recognized as single objects How are conflicts between trajectory driven and feature driven identifications of objects resolved for example in multiple object tracking situations Are there separate what and where processing streams for haptic and auditory perception Are there haptic and or auditory equivalents of the visual object file Are there equivalents of the visual object token How are object identification conflicts between different perceptual systems resolved Is the common assumption that persistent object is a fundamental innate category justified How does the ability to identify and categorize objects relate to the ability to name and describe them using language How are features that an

individual object had in the past but does not have currently represented How are categorical constraints on how objects move or act represented and how do such constraints influence categorization and the re identification of individuals How do human beings re identify objects including each other as persistent individuals across changes in location context and features even after gaps in observation lasting months or years How do human capabilities for object categorization and re identification over time relate to those of other species and how do human infants develop these capabilities What can modeling approaches such as cognitive robotics tell us about the answers to these questions Primary research reports reviews and hypothesis and theory papers addressing questions relevant to the understanding of perceptual object segmentation categorization and individual identification at any scale and from any experimental or modeling perspective are solicited for this Research Topic Papers that review particular sets of issues from multiple disciplinary perspectives or that advance integrative hypotheses or models that take data from multiple experimental approaches into account are especially encouraged
