Supernovae - Proceedings Of The 6th Jerusalem Winter School For Theoretical Physics Tsvi Piran, Steven Weinberg, J Craig Wheeler, 1990-07-23 Supernovae are highly energetic phenomena for which it is necessary to use simultaneously particle physics nuclear physics and hydrodynamics to study the creation of the strong explosions involved. Supernovae synthesize heavy elements and in some cases lead to the formation of neutron stars or black holes. Recent progress has revealed new classes of explosions and new insights into the evolution and explosion mechanisms including that of the dramatic event SN 1987A in the Large Magellanic Cloud. Major questions still remain concerning the evolution of massive stars in binary systems, the nature of gravitational collapse and the physical processes involved in the thermonuclear explosion of degenerate stars. This School explores our current understanding of supernovae and areas of active study.

Supernovae Spectra Roland Edward Meyerott, George H. Gillespie, 1980 Proceedings of the La Jolla Institute Workshop on Atomic Physics and Spectroscopy for Supernovae Spectra sponsored by La Jolla Institute held Jan 10-12 1980 *Supernovae as Distance Indicators* Norbert Bartel, 1985-03 Neutron Stars, Supernovae and Supernova Remnants O. H. Guseinov, Efe Yazgan, Askin Ankar, 2007 In the 1930s scientists discovered that the universe is expanding and that it is quite old. The observation of hydrogen lines in the spectrum of the sun helped Niels Bohr construct his atomic model in 1912 and understand the optical spectra of atoms. This era marked the transition of astronomy into astrophysics. With the rapid technological progress, scientists were able to study the universe in different ways that enabled them to observe what could not be observed using ordinary telescopes. Technology enabled scientists to see the universe in x-rays, gamma rays, radio waves, and even look inside stars with neutrinos. One of the most important results of these developments, the observation of very high energy particles from cosmic distances, led to a complete new branch of physics, namely high energy physics, and provided a valuable tool to understand the very high energy processes going on in the universe, such as in shock fronts of supernova remnants. In the 1960s, very important discoveries in astrophysics, like the microwave background radiation from the Big Bang, quasars, X-ray binaries, pulsars, and cosmic X-ray sources, followed. A significant interest in astrophysics prevailed, and many physicists began to work on these new objects and processes. Among many great physicists, Yakov B. Zeldovich and Igor D. Novikov are worth noting, especially because of their efforts which accelerated the theoretical and phenomenological researches in all of these branches of astrophysics. Astrophysics began to push the boundaries of physics and our world view. Astrophysical results were rewarded with Nobel prizes. Three of these Nobel prizes (1974, 1993, 2002) were given to works on neutron stars. This book is mainly devoted to neutron stars and to objects related to them. The Collected Writings of Fred L. progresses starting from basics in fundamental quantum mechanics The highlight is to offer an overview of nuclear structure phenomena relevant to recent key findings such as unstable halo nuclei superheavy elements neutron stars nucleosynthesis the standard model lattice quantum chromodynamics LQCD and chiral effective theory An additional attraction is that general properties of nuclei are comprehensively explained from both the theoretical and experimental viewpoints The book begins with the conceptual and mathematical basics of quantum mechanics and goes into the main point of nuclear physics nuclear structure radioactive ion beam physics and nuclear reactions The last chapters devote interdisciplinary topics in association with astrophysics and particle physics A number of illustrations and exercises with complete solutions are given Each chapter is comprehensively written starting from fundamentals to gradually reach modern aspects of nuclear physics with the objective to provide an effective description of the cutting edge in the field *Nuclear Science Abstracts* ,1975
