**Children Are Born Mathematicians** Eugene Geist,2015-10-08

Developed to address the new NCTM focal points which use a chronological approach to thinking about what should be taught in early childhood mathematics The book views mathematics as a developmental and constructive process in which the teacher acts as an instructor and facilitator The book takes a 3 E approach to thinking about how math is presented to each age group For infants and toddlers best introduced and presented through interaction with the environment so designing a mathematically active and interactive classroom should be the focus For Preschool and Kindergarten children mathematics is best learned through experiences with materials or projects in the classroom For grade school children more traditional educational experiences become more developmentally appropriate in combination with environment and experience The approach is to see math as a developmental process that children engage in as they grow and develop The teacher s role is to promote concept understanding and development through active experiences and questioning techniques in combination with teaching skills in developmentally appropriate ways

Review DCSF 2008 At the very heart of the success of the book is the authors ability to see mathematics through young children s eyes by listening to and reflecting on the constant efforts made by children to make sense of their world This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable process Branwen Llewelyn Jones Early Years Consultant at PACE Ltd TACTYC Ground breaking To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout If you want to expand your understanding upwards and outwards then get a copy soon Times Educational Supplement I first read Children s Mathematics Making Marks Making Meaning a couple of years ago and it had an immediate impact on my own thinking and teaching and the work I do with trainee teachers I m sure you will find it compelling reading too I think it has the potential to change in a fundamental way how we think about early mathematical development Lynne McClure Editor Math Coordinator s File Mathematics Association In their exceptionally readable and informative book Children s Mathematics Making Marks Making Meaning Carruthers and Worthington 2006 draw attention to one of the main goals of early years teaching that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school These authors suggest that by encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made we are given a window onto their thinking that may otherwise be inaccessible Liz Pumphrey NRICH This book draws on the authors many years of teaching children aged three to eight years and also on their extensive research with children in the home nursery and school The authors explain the development and range of young children s mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods Combining theory and practice this acclaimed book demonstrates how children s own mathematical graphics are highly creative and show deep levels of thinking The authors show how this is the key to success in school mathematics and to higher levels of achievement The authors are winners of TACTYC s 2003 Jenefer Joseph Award for the Creative Arts 3 8 awarded for their innovative work with children on mathematical graphics *Mathematical Learning and Cognition in Early Childhood* Katherine M. Robinson, Helena P. Osana, Donna Kotsopoulos, 2019-05-07 This book explores mathematical learning and cognition in early childhood from interdisciplinary perspectives including developmental psychology neuroscience cognitive psychology and education It examines how infants and young children develop numerical and mathematical skills why some children struggle to acquire basic abilities and how parents caregivers and early childhood educators can promote early mathematical development The first section of the book focuses on infancy and toddlerhood with a particular emphasis on the home environment and how parents can foster early mathematical skills to prepare their children for formal schooling The second section examines topics in preschool and kindergarten such as the development of counting procedures and principles the use of mathematics manipulatives in instruction and the impacts of early intervention
