Surface Archaeology:

Using Computers in Archaeology Gary R. Lock, 2003 Today archaeologists are spending more and more time examining the past with the aid of computers. How does this increased dependence on technology affect the theory and practice of archaeology? *Using Computers in Archaeology* is a comprehensive review of computer applications in archaeology from the archaeologist's perspective. The book deals with all aspects of the discipline from survey and excavation to museums and education. Discussion covers the theoretical aspects of computer applications with particular reference to GIS and the analysis of data but technical jargon is kept to a minimum. With numerous illustrations, case studies and examples, *Using Computers in Archaeology* is a timely introduction to this increasingly important area of archaeology catering both for the student and the experienced archaeologist.

Sampling in Archaeology Clive Orton, 2000-05-11 The first overview of sampling for archaeologists for over twenty years, this manual offers a comprehensive account of the applications of statistical sampling theory which are essential to modern archaeological practice at a range of scales from the regional to the microscopic. Bringing archaeologists up to date with an aspect of their work which is often misunderstood, it includes a discussion of the relevance of sampling theory to archaeological interpretation and considers its fundamental place in fieldwork and post excavation study. It demonstrates the vast range of techniques that are available only some of which are widely used by archaeologists. A section on statistical theory also reviews latest developments in the field and the formal mathematics is available in an appendix cross referenced with the main text.

New Directions in Archaeological Science Andrew S. Fairbairn, Sue O'Connor, Benjamin Marwick, 2009-02-01 Archaeological Science meetings will have a personality of their own depending on the focus of the host archaeological fraternity itself. The 8th Australasian Archaeometry meeting follows this pattern but underlying the regional emphasis is the continuing concern for the processes of change in the landscape that simultaneously effect and illuminate the archaeological record. These are universal themes for any archaeological research with the increasing employment of science based studies proving to be a key to understanding the place of humans as subjects and agents of change over time. This collection of refereed papers covers the thematic fields of geoarchaeology, archaeobotany, materials analysis and chronometry with particular emphasis on the first two. The editors Andrew Fairbairn, Sue O'Connor and Ben Marwick outline the special value of these contributions in the introduction. The international nature of archaeological science will mean that the advances set out in these papers will find a receptive audience among many archaeologists elsewhere. There is no doubt that the story that Australasian archaeology has to tell has been copiously enriched by incorporating a widening net of advanced science based studies. This has brought attention to the nature of the environment as a human artefact, a fact now more widely appreciated and archaeology deals with these artefacts among others in this way in this publication.

Surface Archaeology Alan P. Sullivan, 1998 Discusses the value of weakly patterned surficial assemblages to archaeological understanding of the human past.
