**Surgical Endocrinology** John Lynn, Stephen R Bloom, 2013-10-22 Surgical Endocrinology presents the fundamentals and practical application of the subject matter. It discusses the molecular background and physiology of the endocrine systems. It addresses the legal aspects of endocrine surgery such as duty of care and breach of such duty. Some of the topics covered in the book are the principles of endocrine surgery, molecular structures of organisms, physiology of endocrine system, multiple endocrine neoplasia and molecular genetics, non-surgical management of pituitary tumors, assay formulations and automation technology, syndrome of ectopic hormone production and anesthesia for pituitary surgery. The classifications of endocrine problems for pregnant women are fully covered. The definition and symptoms of thyrotoxicosis are discussed in detail. The text describes in depth the different histological imaging methods. The anatomy and surgery of anterior pituitary are completely presented. A chapter is devoted to the classification of pituitary adenomas and other tumours. The book can provide useful information to surgeons, doctors, students and researchers.

**Endocrine Surgery** I. D. A. Johnston, Norman W. Thompson, 2013-10-22 Butterworths International Medical Review Surgery 2 Endocrine Surgery is a 12 chapter text that describes various surgical procedures for the management of a specific endocrine problem. This book deals first with the principles of thyroidectomy and its application in thyrotoxicosis management. The subsequent chapter discusses the management of clinically solitary nodules without definite evidence of malignancy such as lower cervical adenopathy or recurrent laryngeal nerve palsy. This topic is followed by considerations of reoperative parathyroid surgery, adrenalectomy for Cushing's syndrome, management of percutaneous transhepatic portal and pancreatic vein catheterization for patients with organic hyperinsulinism, hypergastrinemia and carcinoid syndrome, and pancreatic transplantation. This text further examines some surgical considerations of pancreatic islet cell and the pituitary in patients with multiple endocrine neoplasia type I. The concluding chapters explore the benefits and limitations of pre and post-operative treatments of gastrinoma. These chapters also describe the principles and application of surgical treatments in primary aldosteronism and pheochromocytoma. This work will be of great value to established and in training endocrine surgeons, endocrinologists and workers in other fields including radiology and pathology.
