Some online services provide ready-to-use online modules, some do not, but for online tests you must have a test bank. So an online module is a module database containing questions with just one or a few extra features. (There are also examples of more elaborate modules.) The test module includes instructions, answers and feedback on test attempts. If you create a test file you can transform that file into the test questions and answers in multiple-choice, essay, short-answer, or other formats. The module is usually a .doc or .docx file, and contains a small, simple screen.

Information is given in the report's pages and associated information service using a search table and then sorted in a computer program to produce a list of results of the search before you using the Table Manipulator to Make a Working Connection.

1. The main-pane window is set and the sub-window is displayed.
Note: Please refer to the **Hardware Component** section of the user's manual for a diagram of layout of the cable modem and a description of the connections required for the following steps.
 2. Disconnect one of the lowest cables in the cable modem's register. Connect the other end of the lowest cable to the **Cable Modem** in the front panel of the cable modem. Then, after the connection is made, reinsert the cable:
 - The connection is successful if the cable is reinserted without any problems and the cable modem's power indicator is available. You can use a standard Ethernet or coaxial cable.
 - Otherwise, there may already be a cable attached to the computer's serial or parallel or network or power supply to the cable modem.
 3. Plug the power cord into the **AC IN** terminal in the front panel of the cable modem and your computer's power. The cable modem should be on. Check if the light is lit properly.
 4. For the setup, we recommend that you connect the provided Ethernet cable to your **Ethernet** port (RJ-45) and 1, 2, 3, 4, 5 or 6 on the rear panel of the cable modem and connect the other end of the Ethernet cable to your computer. If you have a serial or computer network, modem, router, or connecting the **Cable Modem/Router** kit to the **Serial** or **Serial** port.
- Note:** When 1 or 2 Ethernet ports are used as the primary network for cable modem operations and connected to the appropriate Ethernet for communication, you'll receive 10, 100, and 1000 Gbps network speed. When the other two ports are used, only 100 Mbps is available.
