Design And Construction Of Berm Breakwaters Jentsje Van Der Meer, Sigurdur Sigurdarson, 2016-09-09 Modern design of berm breakwaters began about thirty years ago. However to date there has been a lack of a well established formal design methodology on berm breakwaters. The authors Dr Jentsje van der Meer and Sigurdur Sigurdarson combine over 40 years of collective experience working with breakwaters to put forward a design framework in *Design and Construction of Berm Breakwaters* covering the science and design practices of berm breakwater structures. The original design consisted of mass armoured berms that reshaped into statically stable S shaped slopes. The design was adopted in Iceland and eventually led to a development with more stable structures by using available rock sizes large rock and more rock gradings than just small rock core and large rock berm. This more stable and only partly reshaping structure is called the Icelandic type berm breakwater. Written for researchers and practitioners the volume consists of chapters on geometrical designs of the berm breakwater cross section including berm reshaping and wave overtopping quarry and project management as well as blasting and sorting techniques designs for various wave conditions and available rock classes and case studies of already constructed berm breakwaters.

Artificial Intelligence in Design '94 John S. Gero, Fay Sudweeks, 2012-12-06 Design is an important research topic in engineering and architecture since design is not only a means of change but also one of the keystones of economic competitiveness and the fundamental precursor to manufacturing. However our understanding of design as a process and our ability to model it are still very limited. The development of computational models founded on the artificial intelligence paradigm has provided an impetus for much of current design research both computational and cognitive. Notwithstanding their immaturity noticeable advances have been made both in extending our understanding of design and in developing tools based on that understanding. The papers in this volume are from the Third International Conference on Artificial Intelligence in Design held in August 1994 in Lausanne Switzerland. They represent the cutting edge of research and development in this field. They are of particular interest to researchers developers and users of computer systems in design. This volume demonstrates both the breadth and depth of artificial intelligence in design and points the way forward for our understanding of design as a process and for the development of computer based tools to aid designers.
