Lymphocytes in Human Disease Angus Graham Bird,Jane E. Calvert,1988 During the past two decades cells of the B lymphocyte lineage have been the subject of intensive research B lymphocytes and antibodies play a crucial role in the body's defense against infection but can also be responsible for producing certain diseases This volume provides an up to date discussion of the cellular and molecular biology of antibodies and the cells that produce them Researchers discuss the fundamentals of B cell biology that are crucial to understanding how cells and their antibody products generate a range of malignant autoimmune and immunodeficiency disorders The discussion of human diseases in the second part of the book provides an interface between recent advances in B cell biology and B cell related disease processes

Biological Responses in Cancer Enrico Mihich,1982 The series of volumes entitled Biological Responses in Cancer Progress toward Potential Applications will provide information on approaches through which the interaction between neoplastic and normal cells may be modified Each annual volume will contain contributions in areas where significant progress has been made Topics to be dealt with include immunologic and host defense systems control mechanisms of cell and population growth cell differentiation and cell transformation The regulatory mechanisms controlling the interactions between normal and tumor cells may be immunologic in nature or they may relate to diverse biological characteristics of tumor and normal cells and their response to micro environmental factors While the central question of tumor immunology addresses the nature and uniqueness of tumor associated antigens in humans the identification of the stages of differentiation and functions of the various cell types involved in immunity is advancing rapidly The development of monoclonal antibody methodologies together with progress in the biochemical characterization of cell markers cell separation and measurement of cell functions has significantly aided in the identification and quantitation of different cell

types Establishing the role of these cells in the regulation of human immune mechanisms offers a means for evaluating the status of the immune responses in cancer patients and for assessing the effects tumor and antitumor treatments may exert on their functionality which in turn may alter the effects of antitumor treatments **The Mucosal Immune System in Health and Disease** ,1981 **Contemporary Classics in the Life Sciences: Cell biology** James T.
