## **Surimi Technology:**

**Fish Processing Technology** George M. Hall, 1997-07-31 The first edition of this unique book combined an outlining and updating of the traditional areas of fish processing technology with detailed descriptions of important new areas of work. This fully revised and updated edition continues to provide coverage of modern aspects of traditional processes and highly practical descriptions of important new areas. All the chapters which have been kept from the first edition have been brought up to date and there are four new chapters on methods of identifying fish species, modified atmosphere packaging of fish, aspects of quality and HACCP in fish processing and temperature modeling in fish transportation. Written as an overview of the field for industrialists in developed countries wishing to improve or diversify their operation and for those teaching this aspect of food science and technology, the book is also of proven value to workers in developing countries which are expanding their fish processing industries to earn important foreign currency. **Surimi and Surimi Seafood** Jae W.

Park, 2013-11-12 Originating in Japan in the twelfth century, surimi is refined fish myofibrillar proteins produced through various processes. The development of the surimi product, crabstick, in Japan in the 1970s played a major role in globalizing surimi and expanding surimi seafood consumption to the United States, Europe, and Russia. **Trends in Fish Processing Technologies** Daniela Borda, Anca I. Nicolau, Peter Raspor, 2017-10-30 The high market demand based on consumers' trust in fish as a healthy and nutritious food resource made fish processing a very dynamic industry, spurring many innovations in processing and packaging methods. *Trends in Fish Processing Technologies* not only reflects what is currently new in fish processing but also points out where things are heading in this area. This book provides an overview of the modern technologies employed by the industry. It details the advances in fish processing, including high pressure processing (HPP), pulsed electric field (PEF) treatment, and minimally heat processing combined with microwave (MW) and radio frequency (RF). It provides references to food safety management systems and food safety quality indicators for processed fish in order to achieve an adequate level of protection. Quality aspects and molecular methods for the assessment of fish and fish products integrity are introduced. Fish products reformulation trends based on sustainability principles that tackle the reduction of salt content and the use of natural antimicrobials are presented. Innovative packaging solutions for fish products are explored, detailing intelligent packaging with freshness and time/temperature indicators, applications of modified packaging atmosphere, antimicrobial bio-nanocomposite packaging materials, and biodegradable edible films used as primary fish packaging. In addition to covering the current advancements in fish processing, the book discusses fraud, adulteration, fair trade practices, traceability, and the need for added value, clean and sustainable processing in the fish chain.
