Echnology Assessment in Software Applications Harold F. O'Neil, Jr., Eva Baker, Harold F. O'Neil, 2013-11-05 This volume offers an expansion of ideas presented at a recent conference convened to identify the major strategies and more promising practices for assessing technology The authors representing government business and university sectors helped to set the boundaries of present technology assessment by offering perspectives from computer science cognitive and military psychology and education Their work explores both the use of techniques to assess technology and the use of technology to facilitate the assessment process The book s main purpose is to portray the state of the art in technology assessment and to provide conceptual options to help readers understand the power of technology Technological innovation will continue to develop its own standards of practice and effectiveness To the extent that these practices are empirically based designers supporters and consumers will be given better information for their decisions

*Speech Technology at Work* Jack Hollingum, Graham Cassford, 2013-03-09 Speech technology the use of speech as a means of sending information to and receiving information from computer systems has been in use as a research tool for many years Only recently has it begun to move out of the laboratory and into commercially worthwhile applications first with compressed and synthesised spoken messages then with computer recognition of spoken messages and today with diverse applications involving both recognition and reproduction of human speech We have written this book because we believe the technology has now advanced to the point where many more applications of voice recognition and response are both feasible and economically attractive Computers that can understand everyday speech are still a distant prospect but provided the limitations of present day equipment are clearly understood there is much that can be achieved with it Our aim is to show in non technical language what is now possible with the help of speech technology The text includes many examples of current applications in industry commerce and other fields and we have selected five current industrial applications combining speech recognition and response for more detailed attention Industrial cases have been chosen both because we see industry as an important growth area for speech applications in the next few years and because it presents some of the greatest difficulties in speech recognition if you can make it work in industry then you can make it work almost anywhere
