The Magellanic Clouds:

The Magellanic Clouds A.B. Muller, 2013-06-29 On March 28 and 29 1969 at the occasion of the dedication of the European Southern Observatory some 90 astronomers from all over the world gathered at the ESO headquarters at Santiago de Chile for discussing problems of the Magellanic Clouds They came from Argentina Australia Chile Mexico South Africa and the United States as well as from Europe these latter naturally mostly from the member states of ESO The choice of the subject was an obvious one When erecting the European Southern Observatory as a joint effort in European astronomy it was agreed from the beginning that the field of research should be the southern sky so far hardly explored with large telescopes Among the objects to be investigated the Magellanic Clouds rank highest together with the galactic centre region and the southern spiral structure Being located ten times closer than the nearest large stellar systems accessible to northern observers and containing a stellar population ranging in age from the oldest down to star formation the Clouds provide an ideal laboratory for research on to the stage current problems in astrophysics Yet most of the northern observational astronomers were hardly acquainted with the Magellanic Clouds naturally they are used to think in terms of research projects that can be conducted at their observatories A survey of the status of knowledge and research on the Clouds therefore appeared in order now that the first medium size telescopes of ESO came into operation *New Aspects of Magellanic Cloud Research* Bodo Baschek, Gerhard Klare, James Lequeux, 1993-03-10 The proceedings of the Second European Meeting on New Aspects of Magellanic Cloud Research review the most recent progress in the study of the LMC and SMC The activities within the ground based ESO key programme Coordinated Investigations of Selected Regions in the Magellanic Clouds as well as new exciting observations from space missions ROSAT IUE ISO IRAS result in a more profound insight into the structure kinematics populations stars clusters interstellar medium and the chemical composition and evolution of the Magellanic Cloud system The book addresses researchers and graduate students in astrophysics *The Magellanic Clouds* Bengt E. Westerlund, 1997-02-27 The first book to provide a synthesised and comprehensive account of the Magellanic Clouds **New Aspects of Magellanic Cloud Research** Bodo Baschek, Gerhard Klare, James Lequeux, 1993-03-10 The proceedings of the Second European Meeting on New Aspects of Magellanic Cloud Research review the most recent progress in the study of the LMC and SMC The activities within the ground based ESO key programme Coordinated Investigations of Selected Regions in the Magellanic Clouds as well as new exciting observations from space missions ROSAT IUE ISO IRAS result in a more profound insight into the structure kinematics populations stars clusters interstellar medium and the chemical composition and evolution of the Magellanic Cloud system The book addresses researchers and graduate students in astrophysics *Structure and Evolution of the Magellanic Clouds* S. van den Bergh, K.S. de Boer, 1984-01-31 Proceedings of IAU Symposium No 108 held in Tbingen West Germany September 5 8 1983 *Atlas and Catalogue of Infrared Sources in the Magellanic Clouds* P.B. Schwering, F.P. Israël, 2012-12-06 Around the

beginning of the sixteenth century Portuguese and Dutch sailors first ventured into southern seas With their keen navigational interest in the skies they noted the continuous presence of two cloud like features not far from the almost immediately Southern Pole The first literature mention of these clouds was in the journal written in 1520 by the Italian navigator Pigafetta on the first circumnavigation of the globe by Magalhaes c Pigafetta et al 1962 In honour of this exploit the objects have since become known as the Magellanic Clouds although the Dutch name Kaapsche Wolken Cape Clouds after the Cape of Good Hope has also been in use for centuries The Large and Small Magellanic Clouds are dwarf irregular galaxies orbiting our own Milky Way Galaxy presently at distances of 53 and 63 kpc respectively Humphreys 1984 They are the galaxies nearest to us most other Local Group galaxies are of order ten times more distant The LMC and SMC are also the prototypical blue dwarf irregulars representatives of a class of objects in which several hundred more distant objects are now known Their masses are a few per cent of the mass of the Milky Way Galaxy but they are relatively gas rich and appear to be at the present epoch forming stars at a more prodigious rate than our Galaxy c Lequeux 1984

The Magellanic System (IAU S256) International Astronomical Union. Symposium,2009-04-16 This volume presents the most complete and up to date accounts of our understanding of the Magellanic Clouds and the astrophysical processes within them Observations of these nearby dwarf galaxies continue to advance calibrate and challenge our knowledge of the cosmos They are rich in gas they have been actively forming stars throughout their history and they display a wealth of dynamical features Poor in metals they serve as a stepping stone towards understanding the high redshift Universe In IAU Symposium 256 scientists from vastly different fields of research discuss galactic dynamics the physics of the interstellar medium and star formation and the fundamental properties and evolution of stars New insight was gained by crossing the traditional boundaries of these fields placing the findings in the context of the structure and evolution of this interacting pair of galaxies uniquely available to our ever more powerful telescopes and computational machinery
