Iteration Theory Ecit 91:

Iteration Theory (Ecit 91) - Proceedings Of The European Conference J P Lampreia,Jaume Llibre,Christian Mira,Gyoergy Targonski,Jose Sousa Ramos,1992-12-18 The main theme of the ECIT conferences is Iteration Theory on the borderline between Dynamics and Functional Equations The aim is to foster symbiosis between mainstream dynamics and iteration theory treated in the style of functional equations theory The following topics are focused turbulence and iteration characterization of chaos kneading theory symbolic dynamics bifurcation periods of maps topological dynamics discrete retarded dynamical systems cellular automata as dynamical systems iterative roots of formal power series iterative roots of polynomials phantom iterative roots iterative groups and semigroups families of commuting functions algebraic aspects of iteration theory and functional equations *European Conference on Iteration Theory (ECIT 91)* ,1992 **Iteration**

Lampreia,1992-01-01 **Chaotic Dynamics in Two-dimensional Noninvertible Maps** C. Mira,1996 This book is essentially devoted to complex properties Phase plane structure and bifurcations of two dimensional noninvertible maps i e maps having either a non unique inverse or no real inverse according to the plane point They constitute models of sets of discrete dynamical systems encountered in Engineering Control Signal Processing Electronics Physics Economics Life Sciences Compared to the studies made in the one dimensional case the two dimensional situation remained a long time in an underdeveloped state It is only since these last years that the interest for this research has increased Therefore the book

purpose is to give a global presentation of a matter available till now only in a partial form Fundamental notions and tools such as critical manifolds as the most part of results are accompanied by many examples and figures Aggregating clones, colors, equations, iterates, numbers, and tiles Janos Aczel,2012-12-06 The journal *aequationes mathematicae* publishes papers in pure and applied mathematics and in particular articles on functional equations combinatorics and dynamical systems Its 50th volume appears in 1995 To mark this occasion we are publishing in book form a representative collection of outstanding survey papers assembled for our anniversary issue of *aequationes mathematicae* The articles by Quackenbush Targonski and Moszner discuss composition of functions from different points of view universal algebra dynamical systems iteration and functional equations The Ono Robbins Wahl and the Vince papers on number theory and tiles respectively are thematically linked by lattices Combinatorics in turn links the Vince paper with that of Tutte whose subject is chromatic sums its tools differential and functional equations The Paganoni Ratz and the Forti papers deal with conditional functional

equations and with the related topic of stability Applications to the social and behavioral sciences in particular to aggregation and some theory are presented in the paper by J Aczel The aim of the collection is to survey selected fields of current interest We trust that it will be useful and informative for researchers teachers graduate and advanced undergraduate students of mathematics and for those interested in applications in related fields lanDs Aczel *Aequationes Mathematicae* 50 1995 1 0001

Huertas, Rabinder N. Madan, 1999-07-03 Authoritative and visionary this festschrift features 12 highly readable expositions of virtually all currently active aspects of nonlinear science It has been painstakingly researched and written by leading scientists and eminent expositors including L. Shilnikov, R. Seydel, I. Prigogine, W. Porod, C. Mira, M. Lakshmanan, W. Lauterborn, A. Holden, H. Haken, C. Grebogi, E. Doedel, and L. Chua each chapter addresses a current and intensively researched area of nonlinear science and chaos including nonlinear dynamics, mathematics, numerics and technology Handsomely produced with high resolution color graphics for enhanced readability this book has been carefully written at a high level of exposition and is somewhat self contained Each chapter includes a tutorial and background information as well as a survey of each area's main results and state of the art Of special interest to both beginners and seasoned researchers is the identification of future trends and challenging yet tractable problems that are likely to be solved before the end of the 21st century The visionary and provocative nature of this book makes it a valuable and lasting reference Thirty Years After Sharkovskii's Theorem: New Perspectives - Proceedings Of The Conference Luis Alseda, Jaume Llibre, Michał Misiurewicz, Francisco Balibrea, 1996-01-23 These proceedings contain a collection of papers on Combinatorial Dynamics from the lectures that took place during the international symposium Thirty Years after Sharkovskii's Theorem New Perspectives which was held at La Manga del Mar Menor Murcia Spain from June 13 to June 18 1994 Since Professor A. N. Sharkovskii's landmark paper on the coexistence of periods for interval maps several lines of research have been developed opening applications of models to help understand a number of phenomena from a wide variety of fields such as biology, economics, physics, etc. The meeting served to summarize the progress made since Professor Sharkovskii's discovery and to explore new directions *Annales Mathematicae Silesianae*, 1999 *Grazer mathematische Berichte*, 2002 Solitons, Geometry, and Topology, 1999 *Publicationes mathematicae* Kossuth Lajos Tudományegyetem, Matematikai Intézet, 1997 Mathematical Reviews, 2005 **Journal of Technical Physics**, 1996 **Annales Polonici Mathematici**, 1996 **Kokuritsu Kokkai Toshokan shozō kagaku gjutsu kankei Ōbun kaigiroku mokuroku** Kokuritsu Kokkai Toshokan (Japan), 1997 **Index of Conference Proceedings**, 1993 Discrete and Continuous Dynamical Systems, 2001
