## **The Causes Of Evolution Princeton Science Library:**

**The Causes of Evolution** John Burdon Sanderson Haldane, Leigh, Jr. (Egbert G.), 1993      **The Causes of Evolution** John Burdon Sanderson Haldane, 1990      The Annotated Origin Charles Darwin, 2011-04-15 Charles Darwin's *On the Origin of Species* is one of the most important and yet least read scientific works in the history of science. The *Annotated Origin* is a facsimile of the first edition of 1859 and is accompanied by James T. Costa's marginal annotations drawing on his extensive experience with Darwin's ideas in the field lab and classroom.

**Coping with Complexity: Model Reduction and Data Analysis** Alexander N. Gorban, Dirk Roose, 2010-10-21 This volume contains the extended version of selected talks given at the international research workshop *Coping with Complexity: Model Reduction and Data Analysis* Ambleside UK August 31 September 4 2009. The book is deliberately broad in scope and aims at promoting new ideas and methodological perspectives. The topics of the chapters range from theoretical analysis of complex and multiscale mathematical models to applications in e.g. fluid dynamics and chemical kinetics.

**Invariant Manifolds for Physical and Chemical Kinetics** Alexander N. Gorban, Iliya V. Karlin, 2005-02-01 By bringing together various ideas and methods for extracting the slow manifolds, the authors show that it is possible to establish a more macroscopic description in nonequilibrium systems. The book treats slowness as stability. A unifying geometrical viewpoint of the thermodynamics of slow and fast motion enables the development of reduction techniques both analytical and numerical. Examples considered in the book range from the Boltzmann kinetic equation and hydrodynamics to the Fokker-Planck equations of polymer dynamics and models of chemical kinetics describing oxidation reactions. Special chapters are devoted to model reduction in classical statistical dynamics, natural selection, and exact solutions for slow hydrodynamic manifolds. The book will be a major reference source for both theoretical and applied model reduction. Intended primarily as a postgraduate level text in nonequilibrium kinetics and model reduction, it will also be valuable to PhD students and researchers in applied mathematics, physics, and various fields of engineering.

The Causes of Evolution (Classic Reprint) John Burdon Sanderson Haldane, 2018-10-07 Excerpt from *The Causes of Evolution*: So close a correlation is rather rare in the history of human thought. For example, men had been aware for ages of the existence of a past history of the human race before Daniel or the author of the Book of Daniel made the first attempt to view that history as a whole and give a summary account of it. If Daniel had been the first person to persuade thinking men that the past had differed appreciably from the present, it is clear that his particular account of the historical process would have had a greater intellectual influence than it has actually had. We must therefore carefully distinguish between two quite different doctrines which Darwin popularised: the doctrine of evolution and that of natural selection. It is quite possible to hold the first and not the second. Similarly with regard to the doctrines of Darwin's great contemporary, Marx: it is possible to adopt socialism but not historical materialism.
